Human Coronavirus Types

There are more than 200 types of coronaviruses.

7 affect humans: 4 endemic (NL63, 229E, OC43 and HKU1) causing 15-30% of common cold, 2 (SARA and MERS) epidemic, and 1 pandemic (COVID-19)

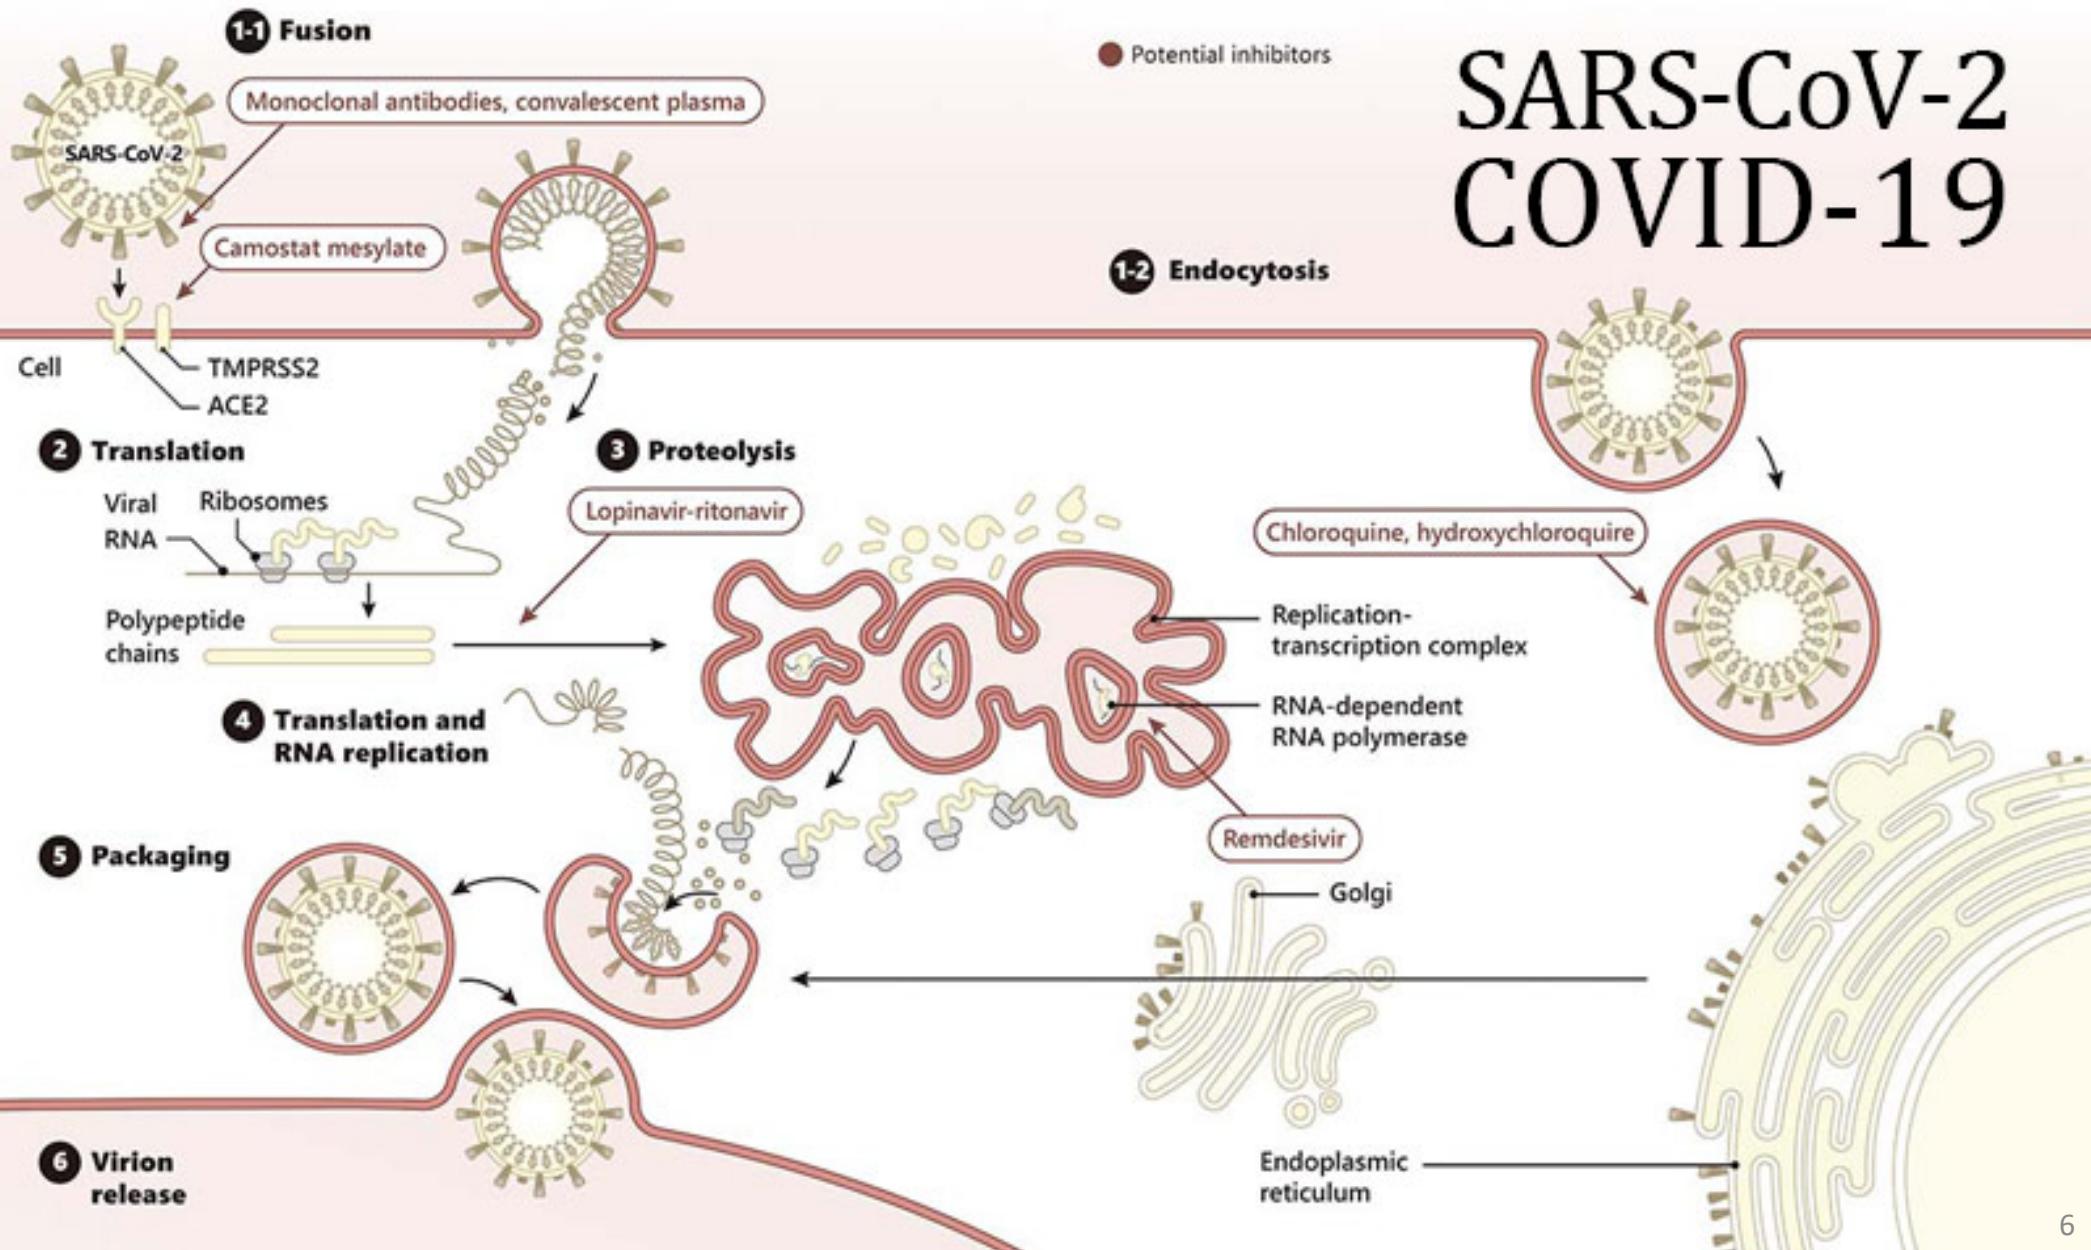

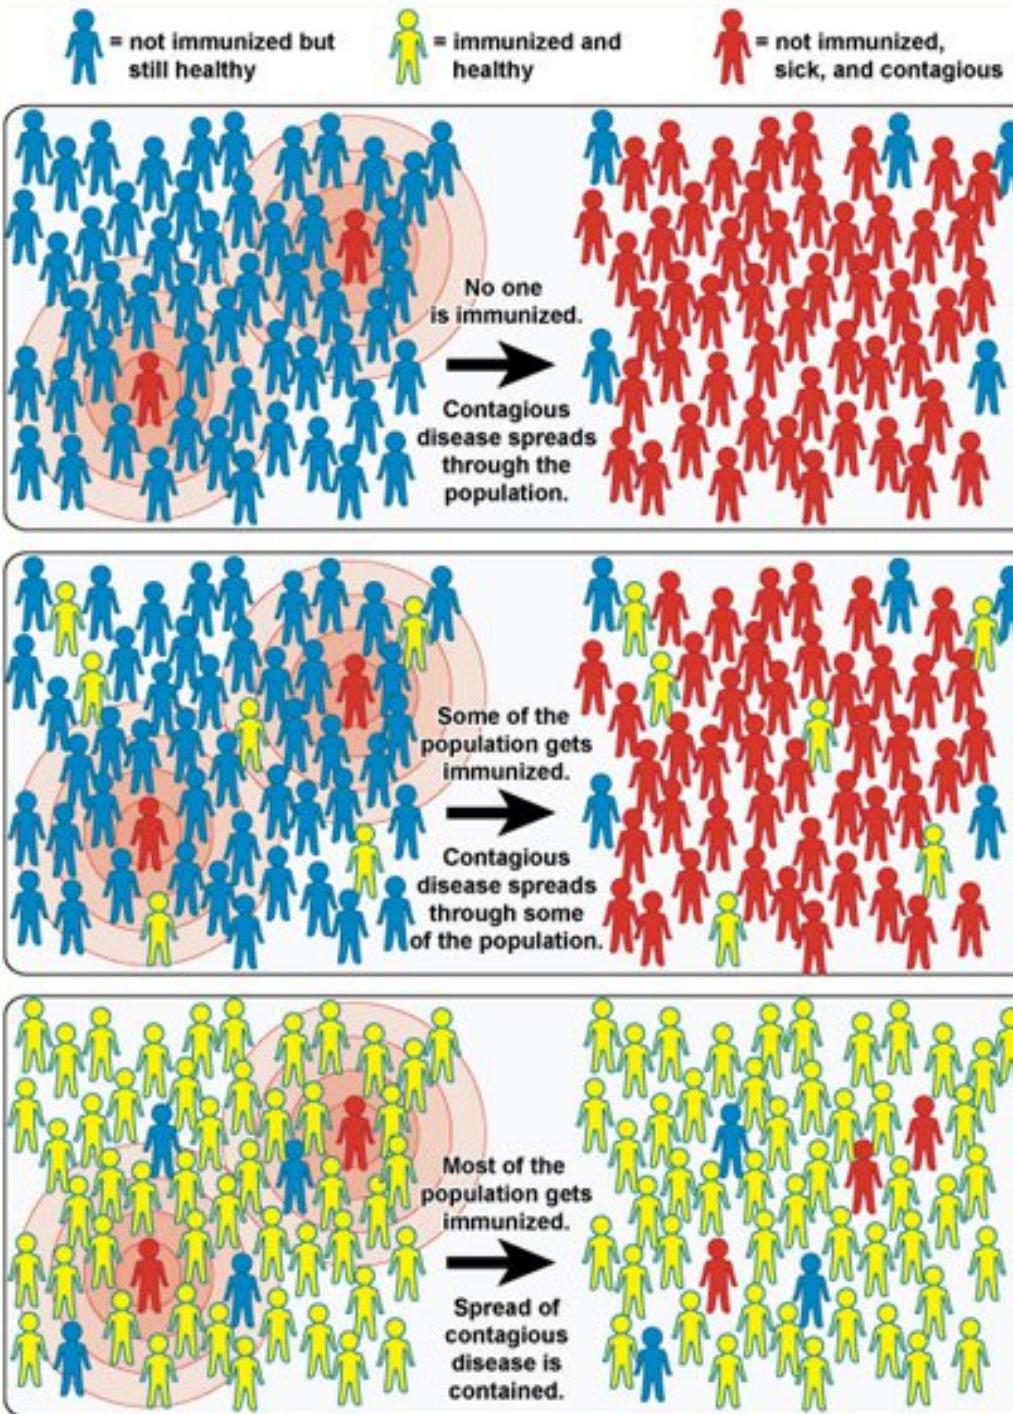

Life cycle of SARS-CoV-2

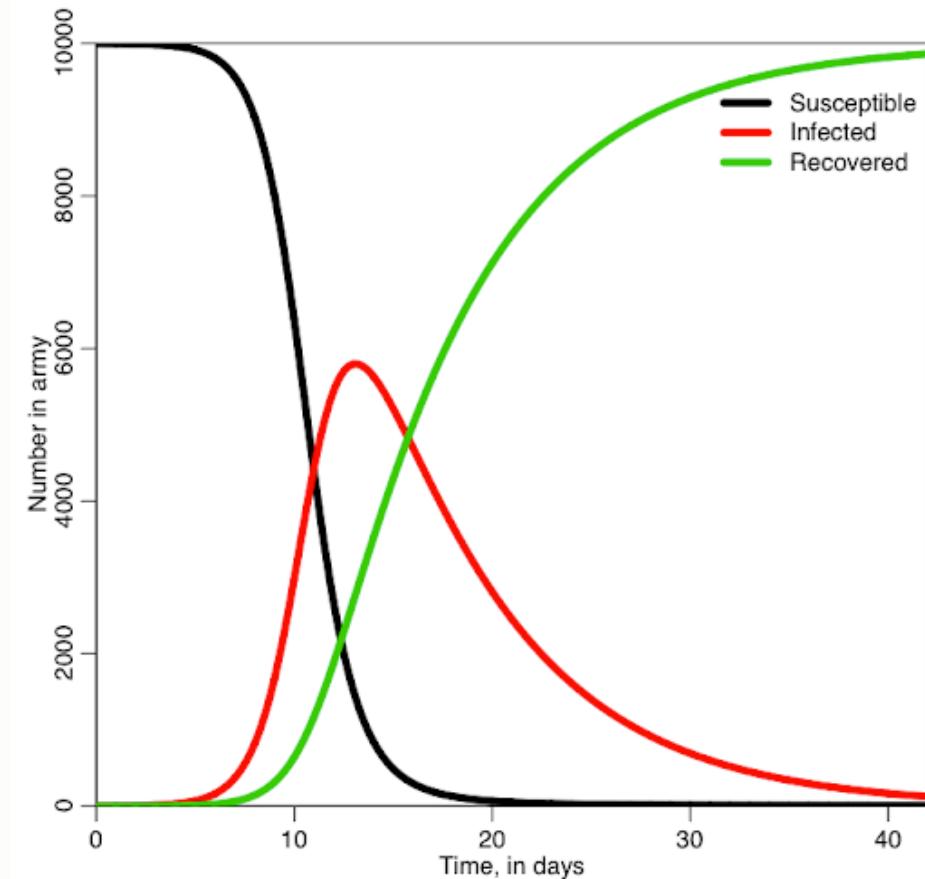

Therapeutic targets for SARS-CoV-2

SARS-CoV-2 COVID-19

Stages of a primary infectious disease

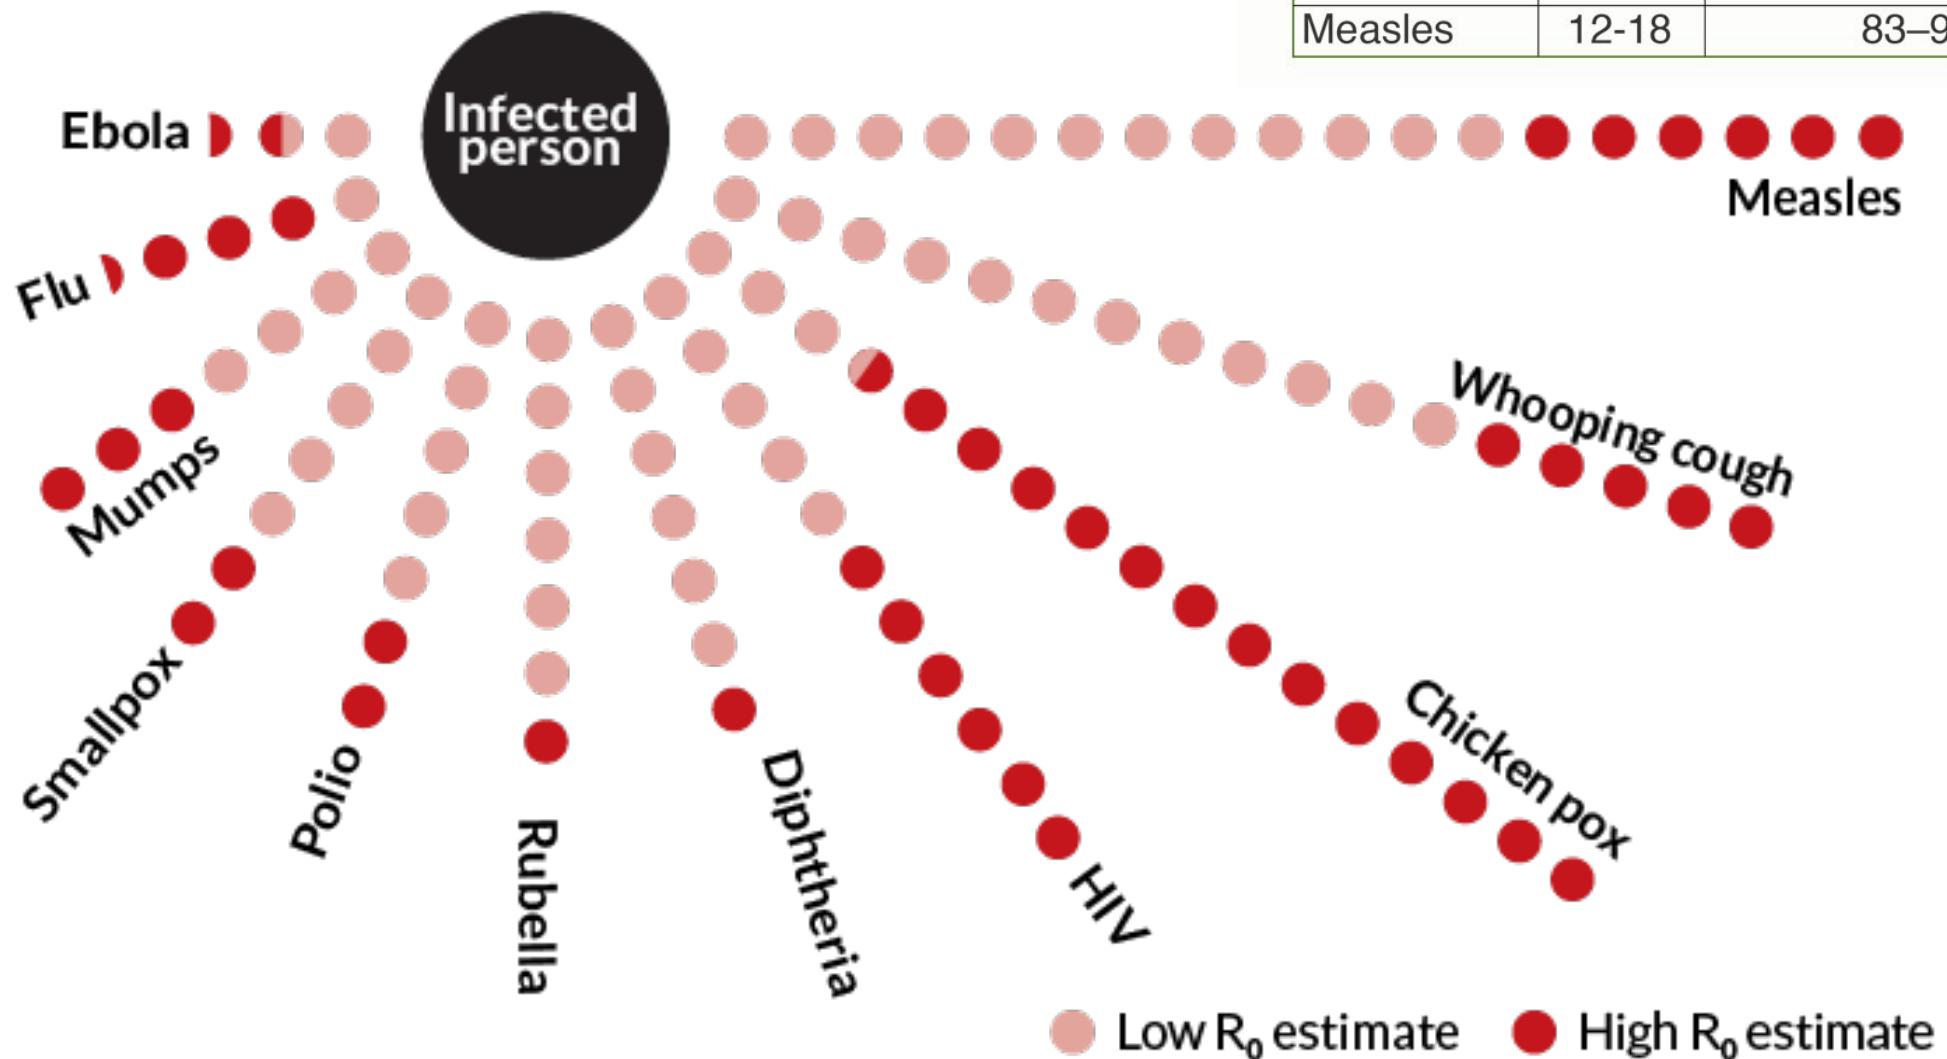

How contagious is COVID-19?

R nought, R₀ 基本傳染數

Herd immunity threshold, HIT

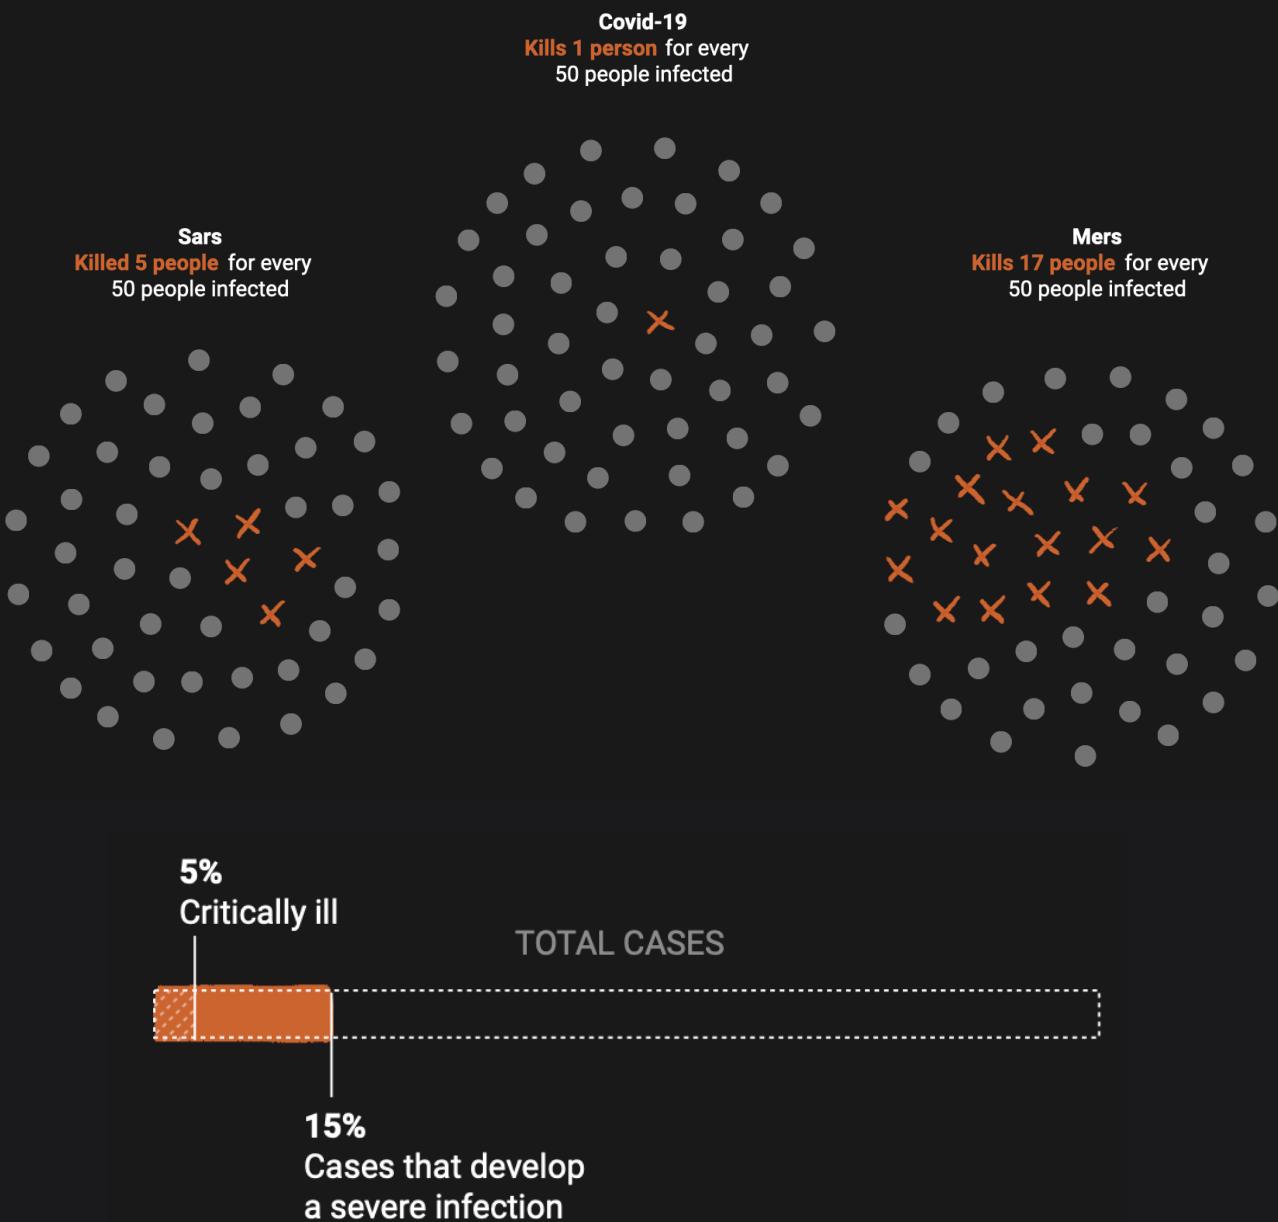

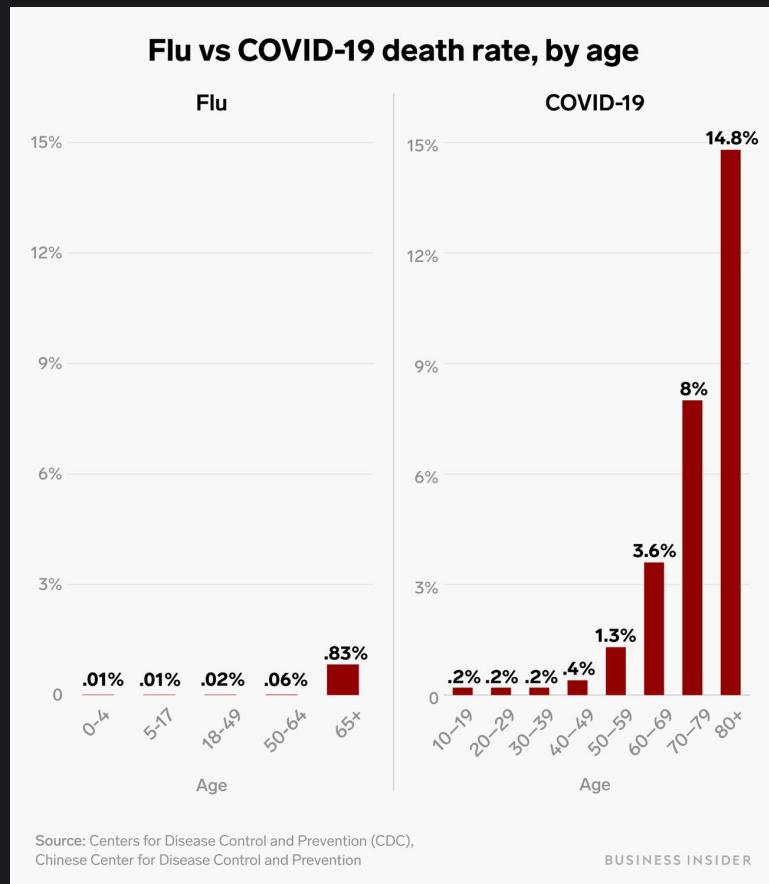

群體免疫閾值, HIT=1-(1/ R₀),

Disease	R ₀	Threshold (%)
Mumps	4-7	75–86
Polio	5-7	80–86
Smallpox	5-7	80–85
Diphtheria	6-7	85
Rubella	6-7	83–85
Pertussis	12-17	92–94
Measles	12-18	83–94

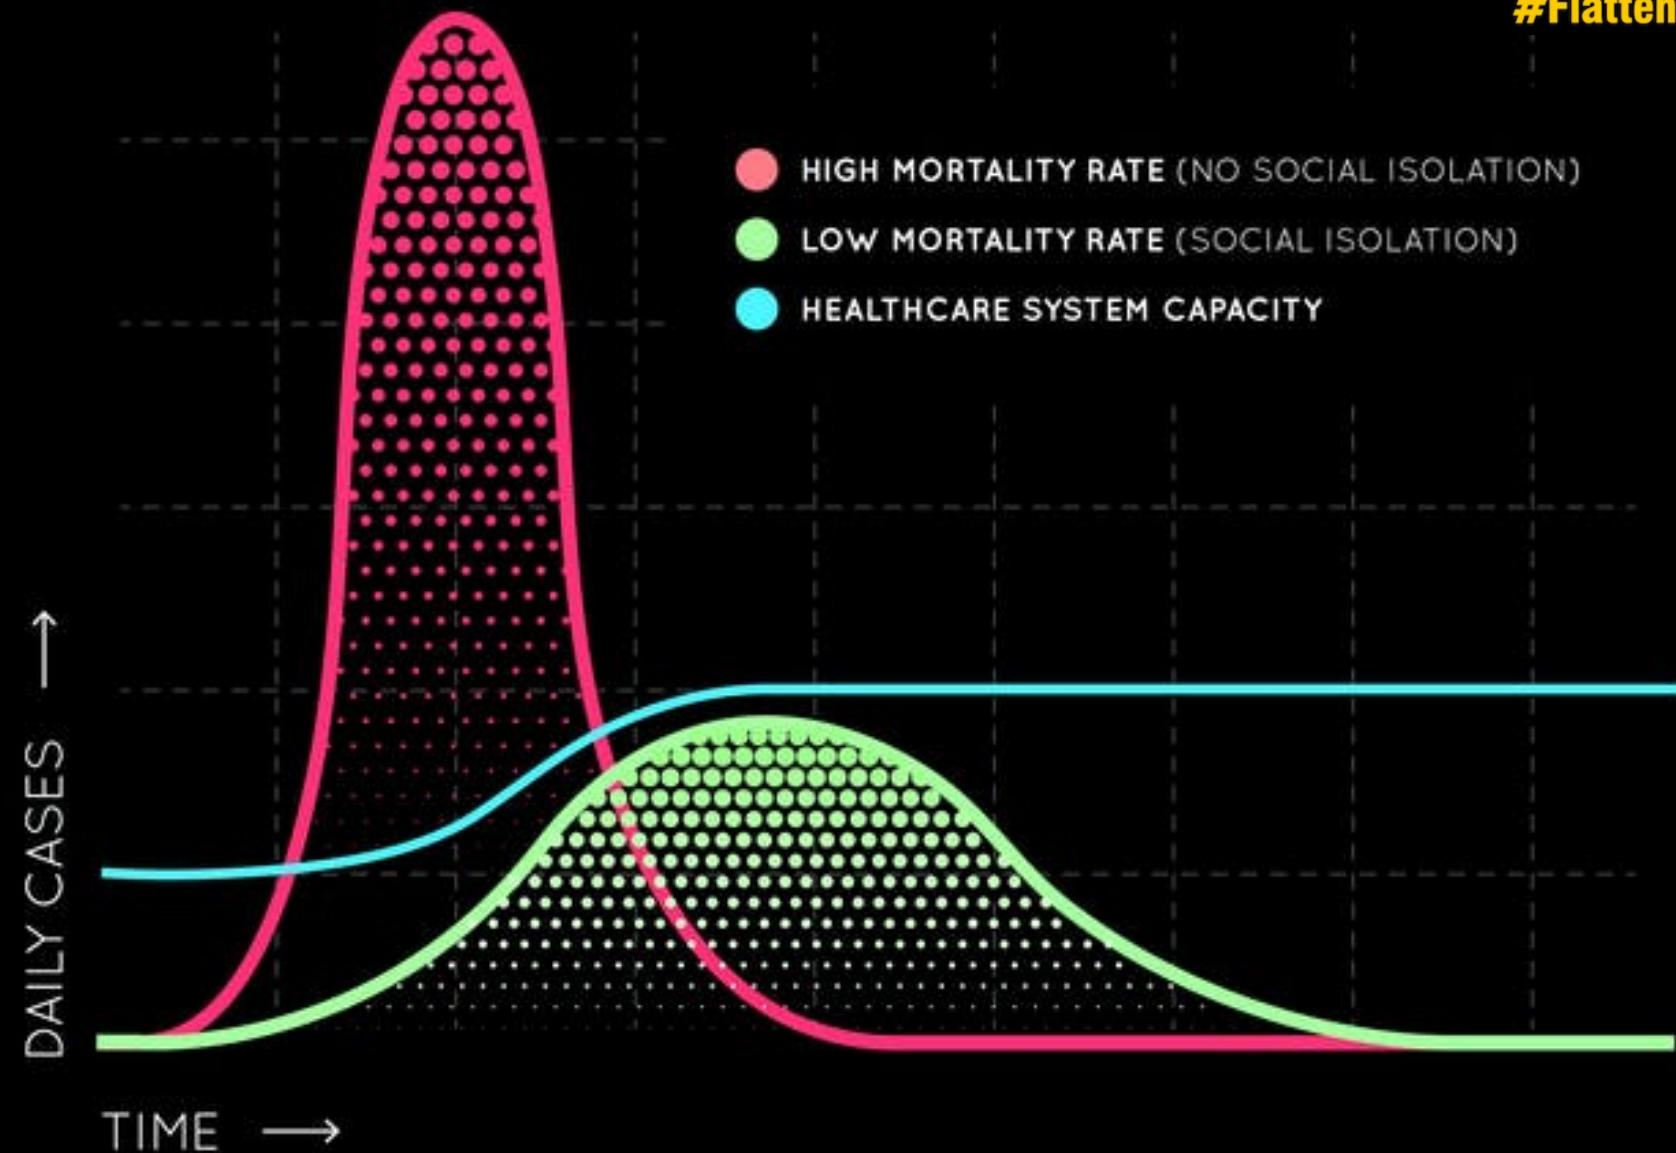

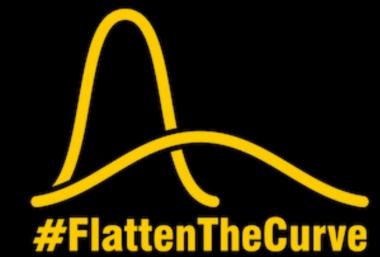

The mortality rate of COVID-19

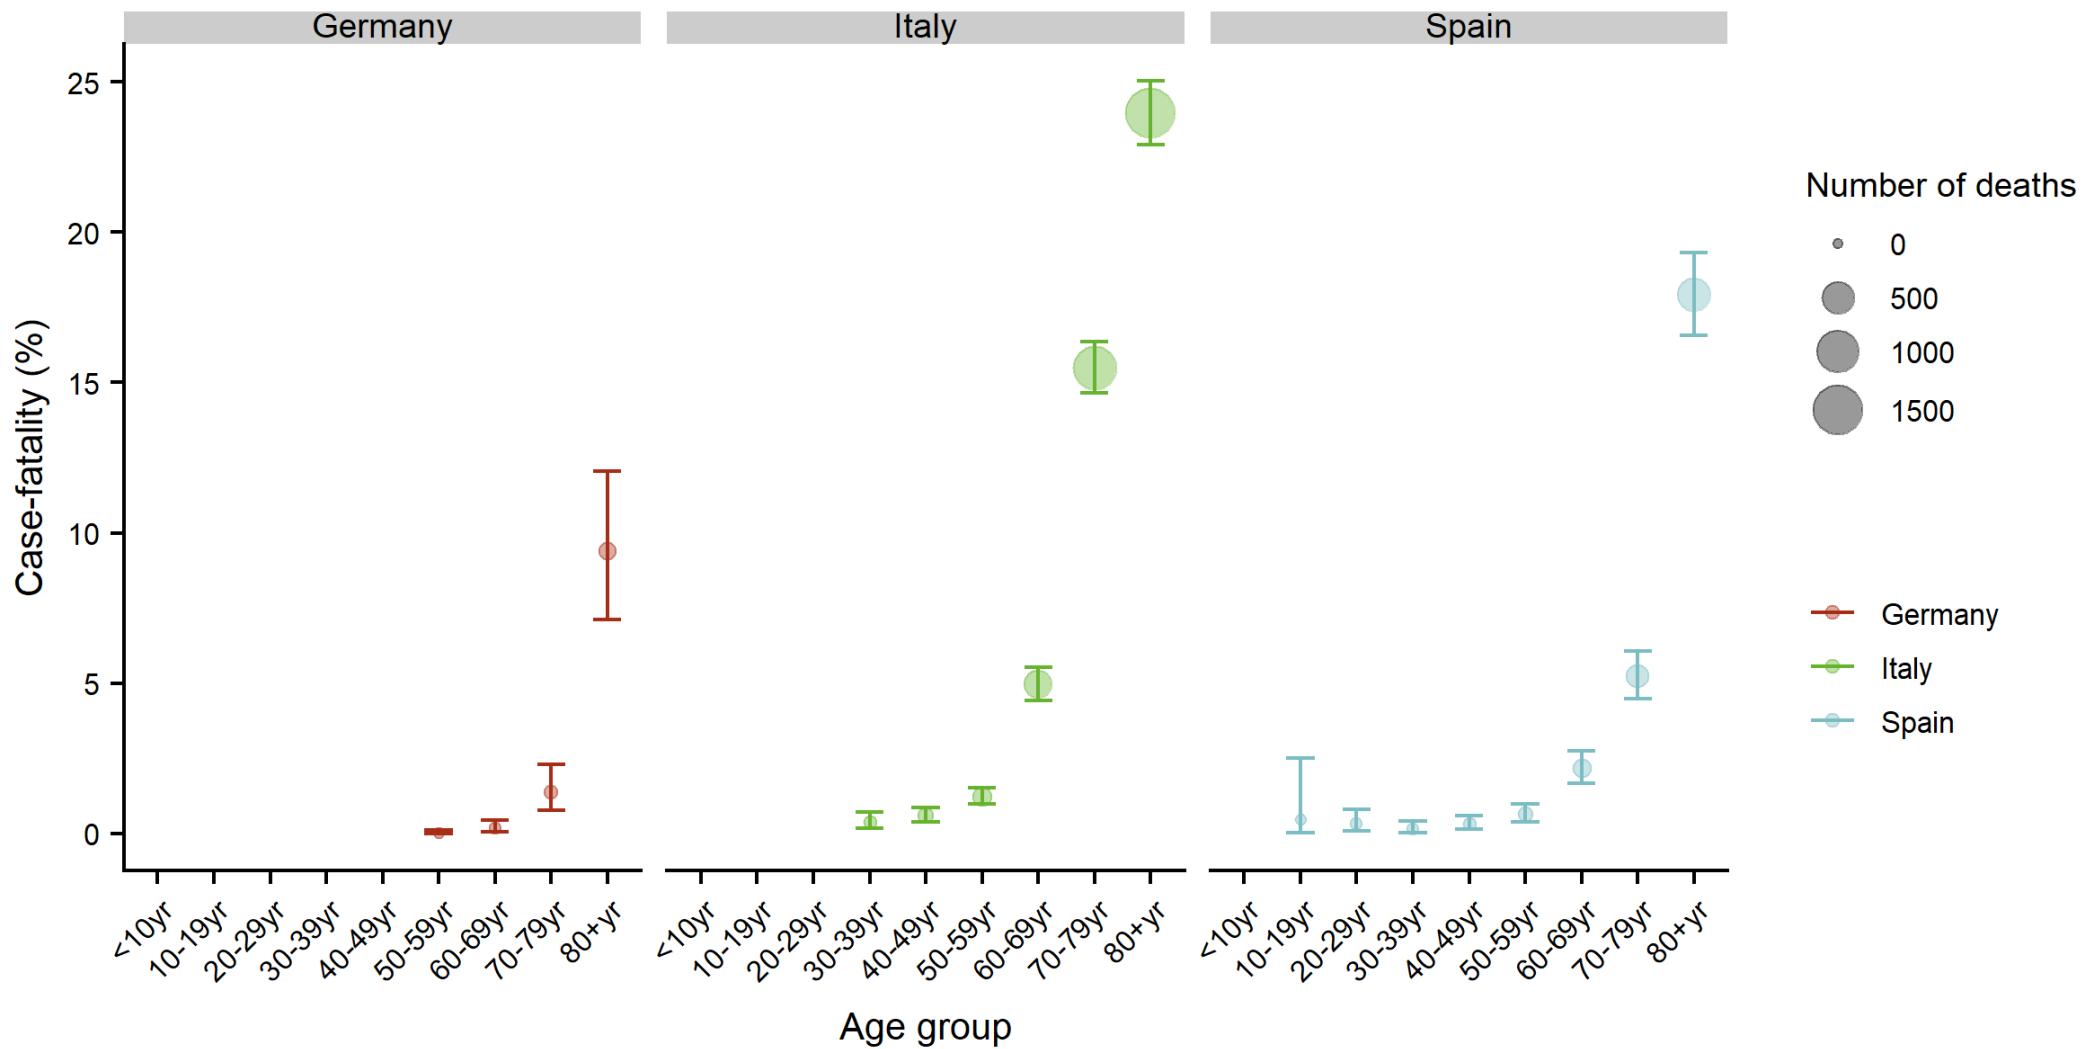

The mortality rate: influenza (0.1%), SARS (9.6 %) and MERS (34.4 %), COVID-19 (1-4% ??)

FLATTENING THE CURVE FOR COVID-19

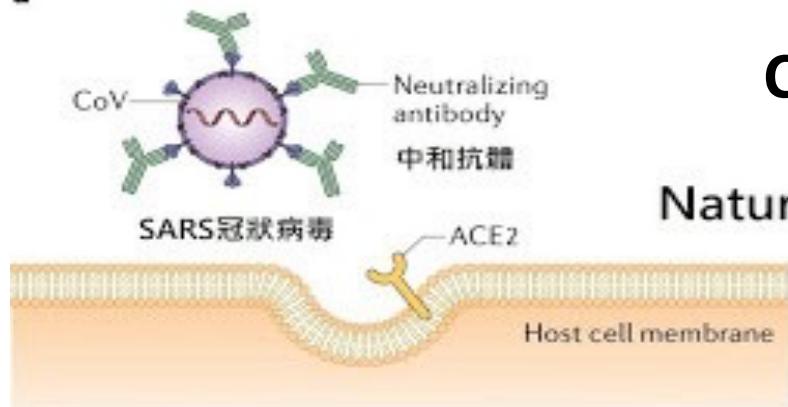

Flattening matters

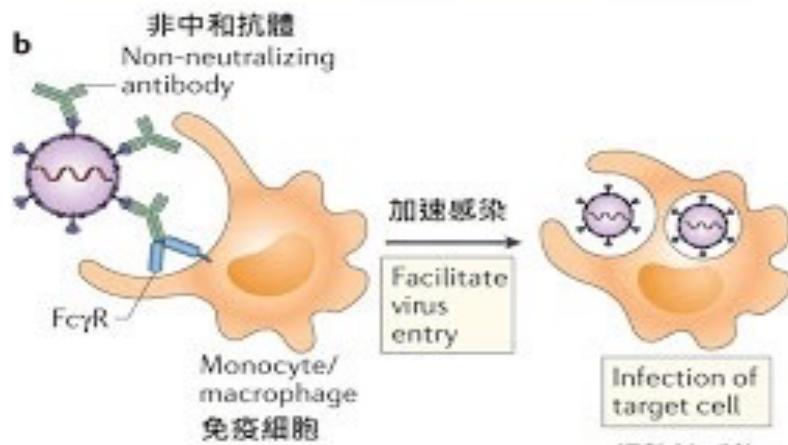

Age-specific crude case-fatality (deaths/all cases) in Germany (TESSy data up to 24 March 2020), Italy (country report with data up to 19 March 2020) and Spain (country report with data up to 22 March 2020)

b

c

COVID-19 vaccines- all things considered

Nature : 冠狀病毒感染後產生的抗體不一定都是有用的抗體

- 因為SARS與COVID-19相似，所以有參考價值
- 絕大部分的感染者產生的抗體是有效可以預防再次感染
- 中和抗體(Neutralized Ab)是有效的抗體
- 非中和抗體(Non-neutralized Ab)則是差的抗體
- 中和抗體可以阻止病毒感染宿主細胞
- 非中和抗體反而加速病毒感染
- 非中和抗體開門通敵讓病毒感染宿主免疫細胞
- 非中和抗體使得感染過程產生更嚴重的發炎反應
- 抗S蛋白抗體是較有用的抗體
- IgG抗體是較有用的抗體
- 抗體濃度較低時較容易出現，開門通敵加速感染反應

過去SARS疫苗研發過程出現的問題：

- 產生非中和抗體，反而造成實驗動物因更嚴重肺炎死亡
- 年紀大老鼠產生較低的抗體製造反應
- 鼻吸入疫苗比肌肉注射在呼吸道產生更高濃度的抗體

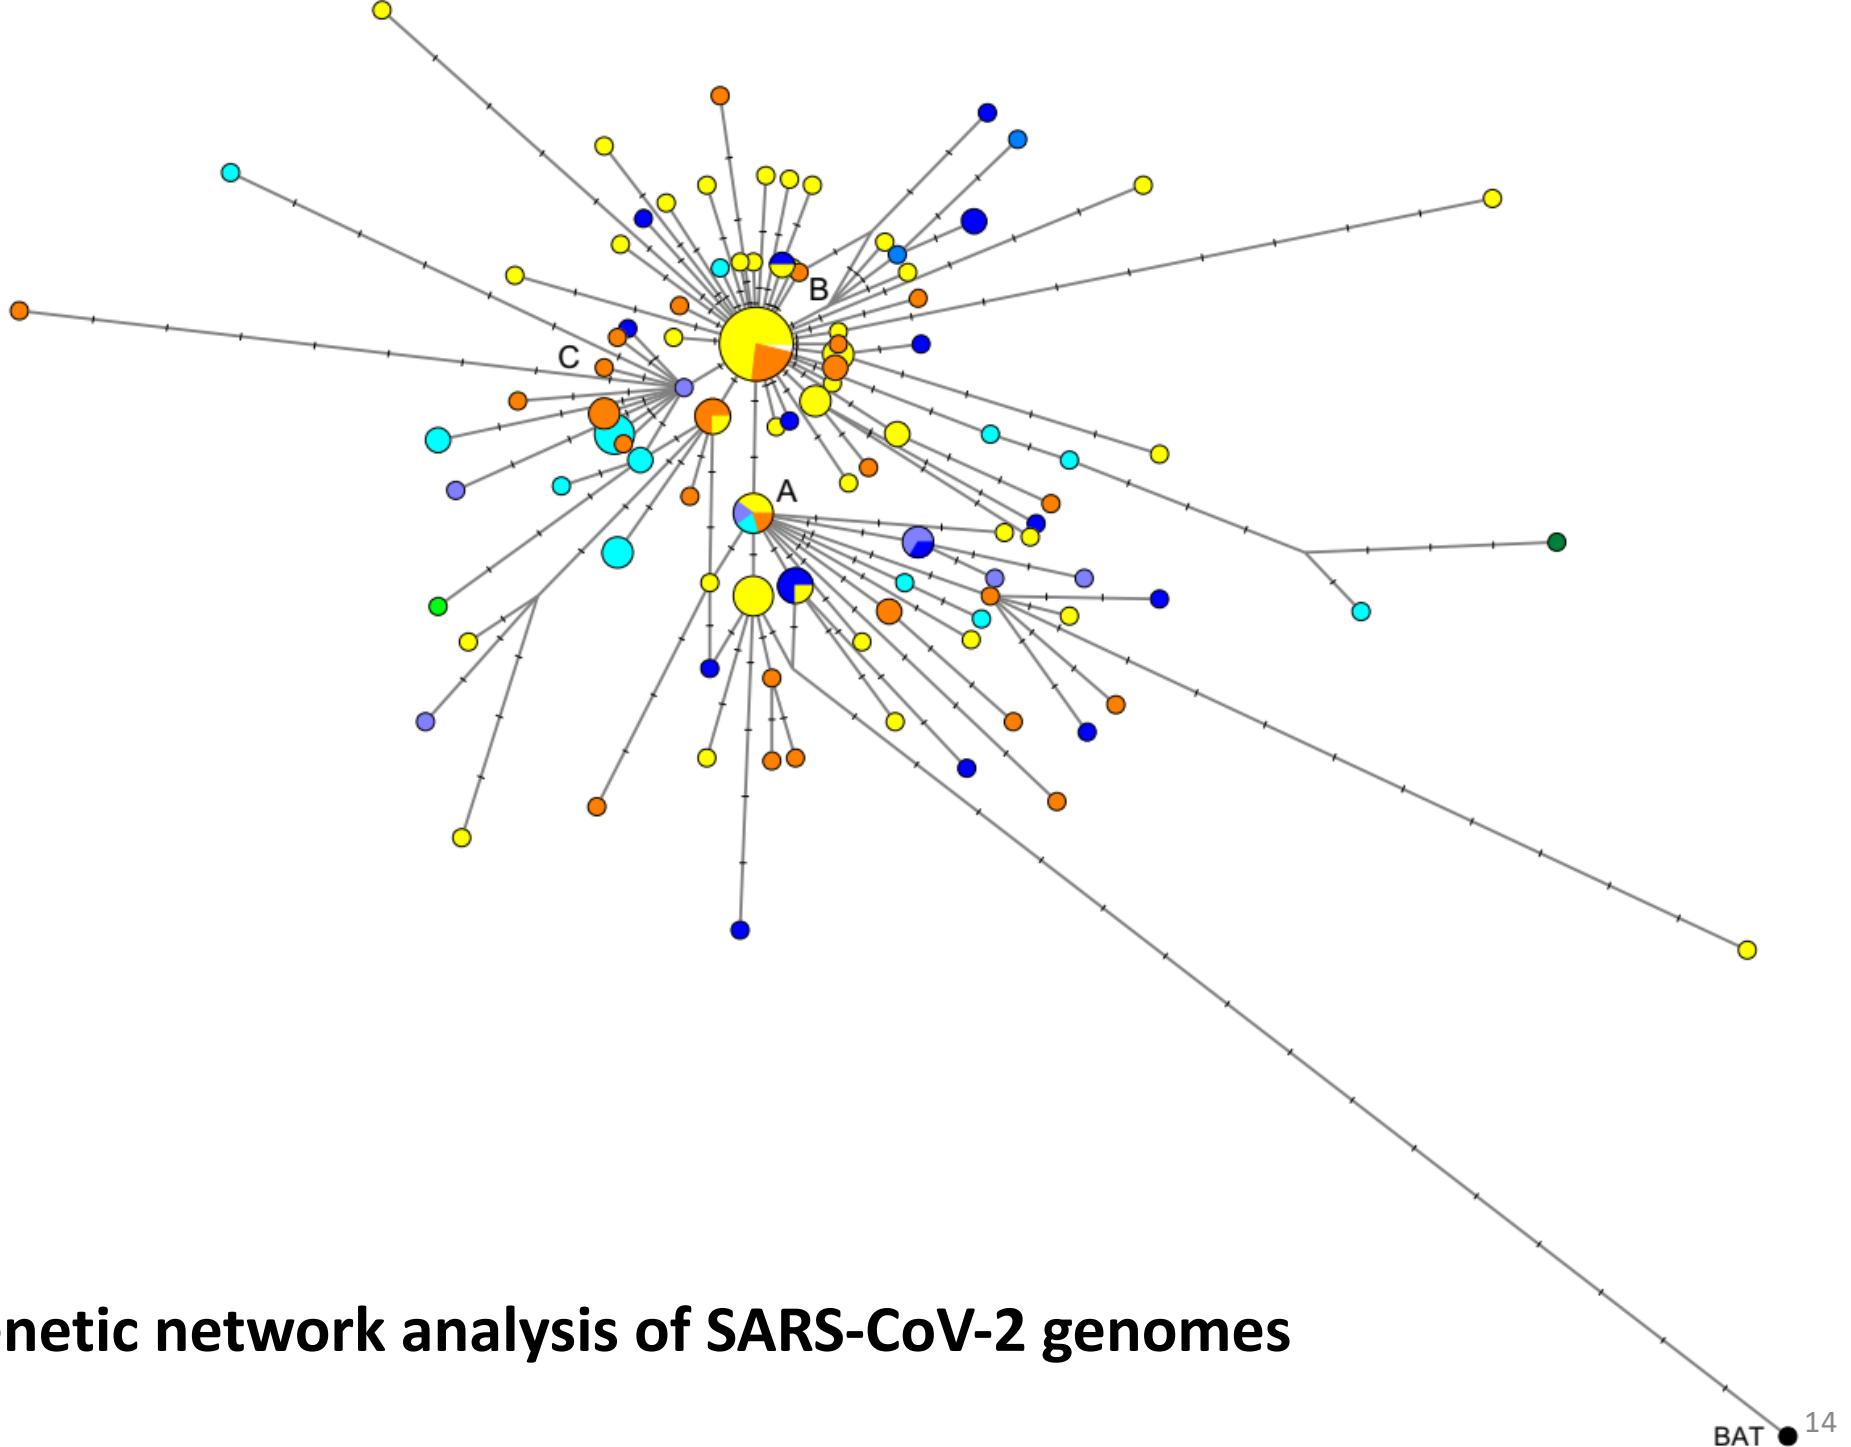

Iwasaki, A., Yang, Y. The potential danger of suboptimal antibody responses in COVID-19. Nat Rev Immunol (2020).

Serology-based tests for COVID-19

				Expertise Needed
Rapid diagnostic test (RDT)	10-30 minutes	The presence or absence (qualitative) of antibodies against the virus present in patient serum.	The amount of antibodies in the patient serum, or whether these antibodies are able to inhibit virus growth	Point-of-care testing, usually handheld, minimal training needed
Enzyme-linked immunosorbent assay (ELISA)	2-5 hours	The presence or absence (quantitative) of antibodies against the virus present in patient serum	Whether the antibodies are able to inhibit virus growth	Lab space generally required; some technical training required
Neutralization assay	3-5 days	The presence of active antibodies in patient serum that are able to inhibit virus growth ex vivo, in a cell culture system	May miss antibodies that are specific for viral proteins not involved in replication	Lab space required, at least BSL-3 if using live SARS-CoV-2; extensive training needed

What we have learned from New York state

New York State Governor Cuomo said that preliminary findings from an antibody study conducted on 3,000 people at grocery stores across New York State found a 13.9% had coronavirus antibodies, suggesting a **13.9% actual infection rate statewide (21.2% in New York City)**, which translates to an estimate of about 2,700,000 actual cases in New York State (**10 times more** than the about 270,000 cases that have been detected and reported officially). Governor Cuomo acknowledged that the official count reported by New York State (which still is not including probable deaths as recommended by the new CDC guidelines) of about 15,500 deaths is "not accurate" as it doesn't account for stay at home deaths. Based on Worldometer's count (which includes probable deaths reported by New York City) of about 21,000 deaths and the 2,700,000 case estimate from the new antibody study, the actual case **fatality rate in New York State could be at around 0.78%**.

KPMG Insight 因應疫情影響，企業可採取之相關措施

立即因應行動方案

保護員工和客戶安全

- 運用人力資源專業知識來維護員工的身心健康，並重新評估組織範圍內的旅行政策。
- 在員工穩定、經營環境、社會與經濟等方面進行企業社會責任實踐
- 為受影響的員工制定備援計劃，包括遠距工作安排或其它彈性資源的應急方案。
- 運用內外部技術來協助企業運作並替員工配備必要工具，使其在受影響區域中的人員可能無縫進行遠距工作。

評估供應商風險

- 建立危機應對團隊，並維護企業股東的信心，並通知受影響的客戶。
- 建立供應鏈評估和風險管理的團隊，根據需求、成本、服務和可行方案的情境進行分析評估，以重新配置全球和區域供應鏈流程。
- 將關鍵原料與營收進行核對，確認對營收影響最大的零組件和原料。
- 檢視與主要客戶及供應商合約，了解在供應短缺時可能應負責任。
- 透過確認目前和緩衝庫存的風險差距，以建立管理層透明和短期行動計劃。

做好營運資金與計畫管理

- 修改現金流、營運資金、庫存和供需預測。
- 瞭解股市進一步下挫與資金取得受限如何影響金融穩定。
- 檢視整體組織內的銷售和營運計劃，及整合企業各業務計劃，以協助確保業務的戰略和策略計劃在所有事業處之間保持同步。
- 擁有豐富數據環境的企業可以運用高階模擬技術來幫助確定當前危機中最佳的性能折衷，從而利用採購、運營和研發方面的能力。

KPMG Insight 因應疫情影響，企業可採取之相關措施

中長期因應行動方案

制定情境計畫 (Scenario planning)

- 在制定和實施強化風險管理時，企業必須謹慎採取行動，並注重能提供先機的情境分析計畫。
- 情境分析可幫助企業看到更多前景，並做出有效決策：如持有多少庫存及存放在哪？如何平衡庫存成本與無法滿足客戶的成本？以即時庫存、客戶需求和供應商能力為評估基礎，可迅速模擬並確認矛盾與目標之間的「最佳點」。
- 透過分析過去事件與假設未來威脅，企業能夠確定重大危機中的戰略，並可以判斷當前內部風險能力不足的情況。

供應商風險管理

- 即時供應商資料，如系統性能分類警示、地緣風險事件等，有助於營運管理與解決問題。
- 當出現警示時，企業應採取積極措施，透過接觸受影響區域之外的供應商來發現其它曝險情況，以辨別供應鏈中的上游供應依存關係。
- 企業可從平衡供需受益，並與股東以及關M鍵edia供應商合作，以合約形式訂定基本物流成本和必要的緩衝庫存，進而減少危機時突然的價格上漲。

端對端供應鏈管理

- 隨著轉移至電商平台情況增加，企業必須確保供應鏈及物流能滿足需
- 透過端對端供應鏈管理，可提高建模及預測消費者行為的能力，尤其在不確定和遭阻擾的情況下

KPMG Insight 因應疫情影響，企業可採取之相關措施

中長期因應行動方案

微型供應鏈

- 微型供應鏈是有限且敏捷的微型營運模式，運用高度靈活的分散性以及更改生產和配送的能力，能在短時間內大量生產並推出新產品。
- 透過分散式方法(decentralized approach)，微型供應鏈可在盡可能接近客戶的地方創造價值，進而協助處於危機時期的企業，能從中受益。
- 除疫情之外，微型供應鏈也不易受大環境影響，如利率、匯率、稅制改變、貿易關稅等

協作供應商關係

- 對於以中國為營運重點的企業而言，因現行供應鏈生態圈的規模與品質，而完全退出中國市場是不切實際的作法。
- 可利用此次危機，作為與更多關鍵供應商，建立互信及透明度的時間與投資平台。

科技升級 & 網路安全計畫

- 依據目前所處以科技驅動商業的環境，企業應重新思考在辦公室、各地區和全球內，員工之間及員工與客戶間的合作方式。
- 透過內部科技投資，企業可以指導員工如何有效運用強大的執行工具如雲端辦公室、零接觸模式等。此將確保不僅危機時團隊可良好進行遠距工作，且隨著業務環境不斷變化，員工能適應並繼續為客戶提供服務。
- 世衛組織(WHO)知曉有電子郵件試圖利用2019年新冠肺炎緊急狀態的情形，此為網路釣魚郵件，而透過此方法，網路犯罪份子可安裝惡意軟體或竊取敏感資訊。

COVID-19's burden of success

- Similarities between SARS-CoV-1 and SARS-CoV-2, including high genetic relatedness
- Using symptom-based case detection (fever, cough, and shortness of breath) and subsequent testing to guide isolation and quarantine.
- Conventional views on developing herd immunity

Challenges

- 1. Pre-symptomatic and/or asymptomatic transmission**
- 2. Antibody-mediated immune/infection enhancement**
- 3. Reinfection**
- 4. Duration of immunity**

SIX DOMAINS OF PREPAREDNESS

The **Public Health Emergency Preparedness Program** works to advance six main areas of preparedness so state and local public health systems are better prepared for emergencies that impact the public's health.

Community Resilience:

Preparing for and recovering from emergencies

Incident management:

Coordinating an effective response

Information Management:

Making sure people have information to take action

Countermeasures and Mitigation:

Getting medicines and supplies where they are needed

Surge Management:

Expanding medical services to handle large events

Biosurveillance:

Investigating and identifying health threats

Surveillance

SARS-CoV-2 COVID-19

COVID-19 TEST	Antigen-based immunoassay	Antibody-based immunoassay	Real-time PCR
Analyte	Antigen	Antibody	Gene
Detectable period	From a few days after onset of symptoms	From 7-28 days after onset of symptoms	All of stages
Sensitivity	50-70% (expected)*	More than 95%	More than 95%
Specificity	50-70%*	Not clear*	More than 95%
Detection of asymptomatic infection	Depending on the amount of viral antigen	At the later stage of infection	From the early stage of infection
Status of use	Only some regions	Only some regions	All of countries (recommended by WHO & CDC)

*Based on conventional antigen-based immunoassay and affected by seasonal coronaviruses

Reference: Oral presentation from online forum of KOFST(The Korean Federation of Science and Technology Societies)

FATALITY RATE

For every 50 people that were infected,

MERS killed **17 people**

SARS killed **five people**

and the new coronavirus killed **one**

VELOCITY OF THE VIRUS

For the first 1,000 people to be infected,

MERS took **903 days or 2.5 years**

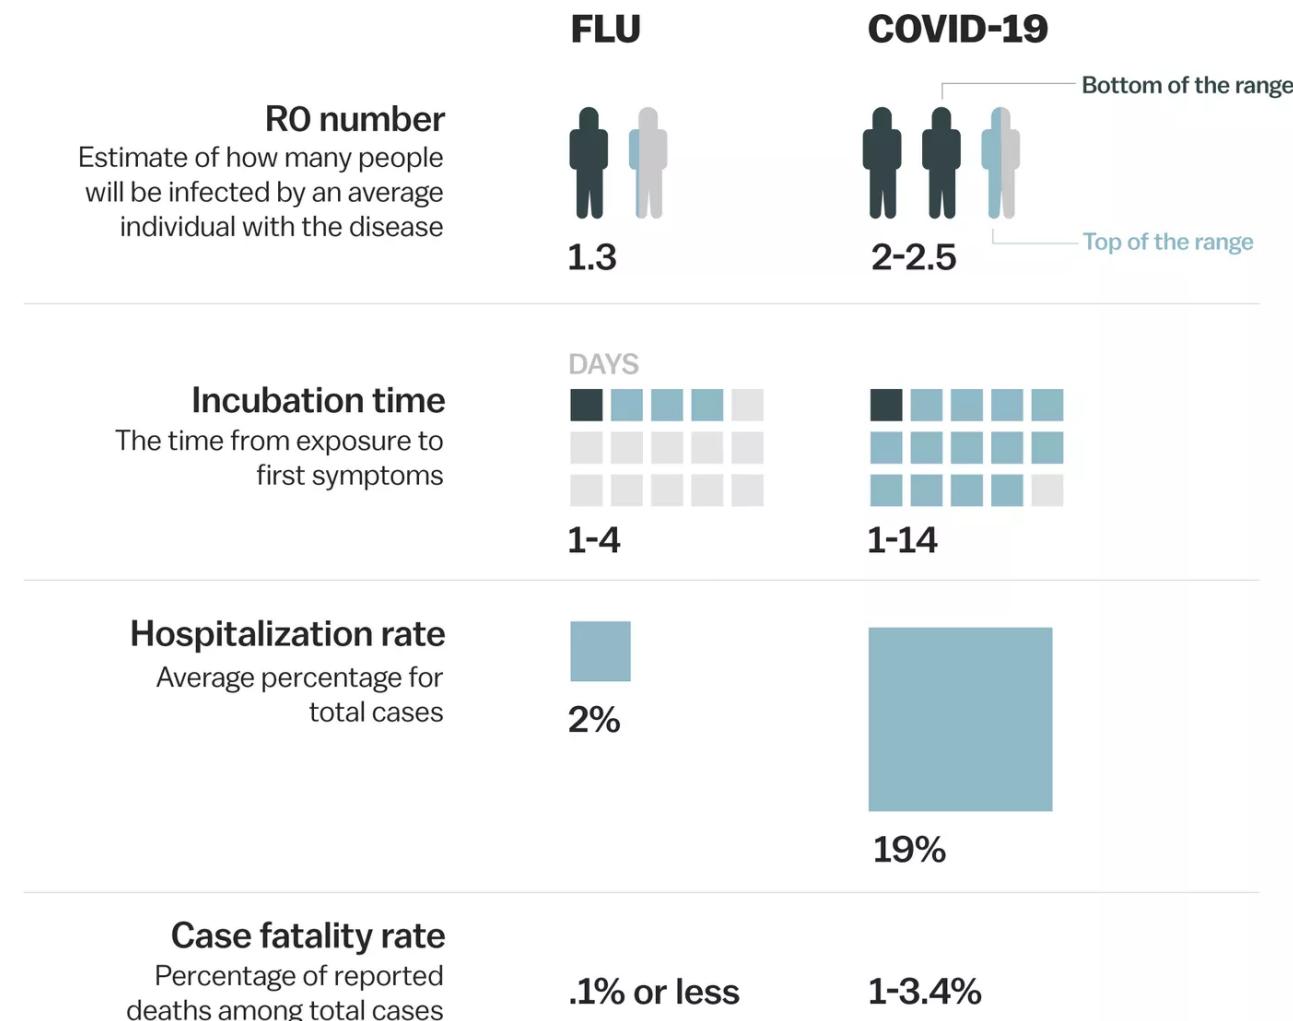

SARS took **130 days**

and the new coronavirus took **48 days**

MEDCHEX

An e-Alert system for automatically detecting pneumonia from chest x-rays.

They created a Unet++ based machine learning model to automatically detect the presence of pneumonia using the labelled dataset.

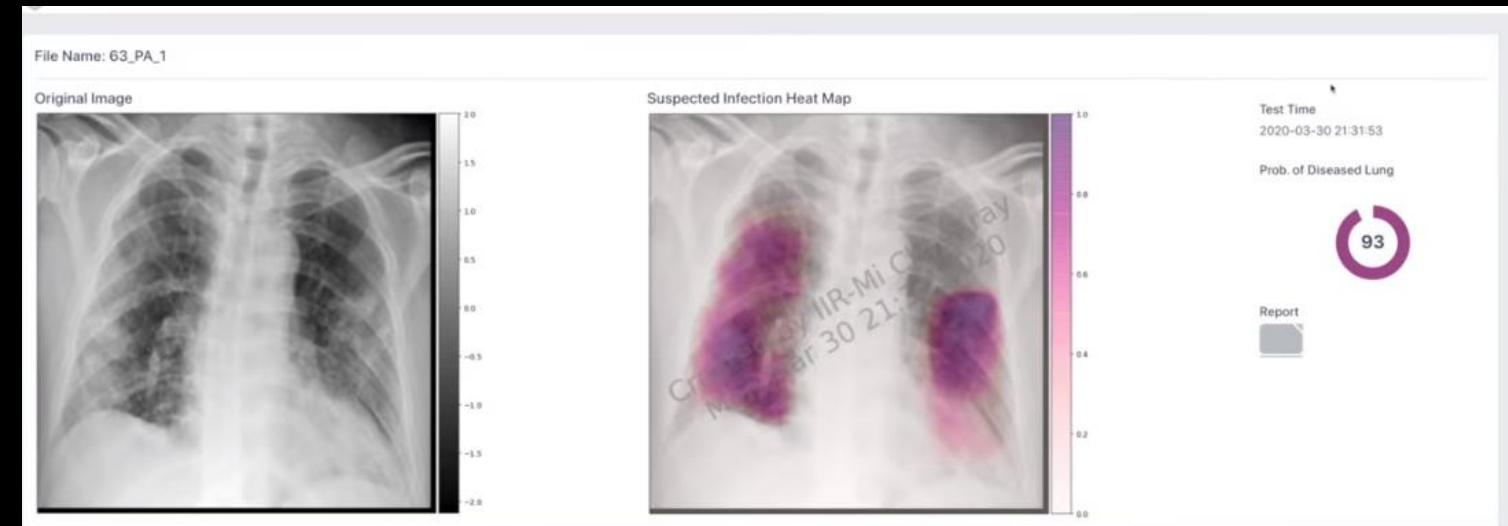

The system has already been tested with and adopted by doctors at the National Cheng Kung University Hospital. It has reduced testing time, and has increased efficiency.

The system achieved 92% accuracy to detect pneumonia based on 1400 images

Auto Segmentation

Automatic detection of pneumonia and labeling of the corresponding area in the diseased lung are accomplished with a deep learning approach.

Oxitone Wearable Vitals Monitor

Tracking at-home health, and to predict COVID-19 problems before they escalate.

It continuously tracks respiratory rate, skin temperature, pulse rate, heart rate and blood oxygen (among other vitals).

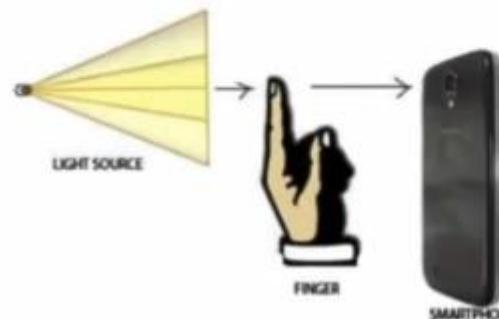

5VID-CO

5vid.co provides at-home Covid-19 screenings via web application. We use CV, video-chat, and a symptom scoring system to assess Covid-19 risk and escalate critical patients to local health volunteers.

Smartphone-based Remote Photoplethysmography

Based on: <https://www.iiitd.edu.in/noc/wp-content/uploads/2017/11/06959086.pdf>

- The idea is to measure blood oxygen saturation and heart rate using a short video of your fingertip, with a shining light behind it. A sketch is shown below:

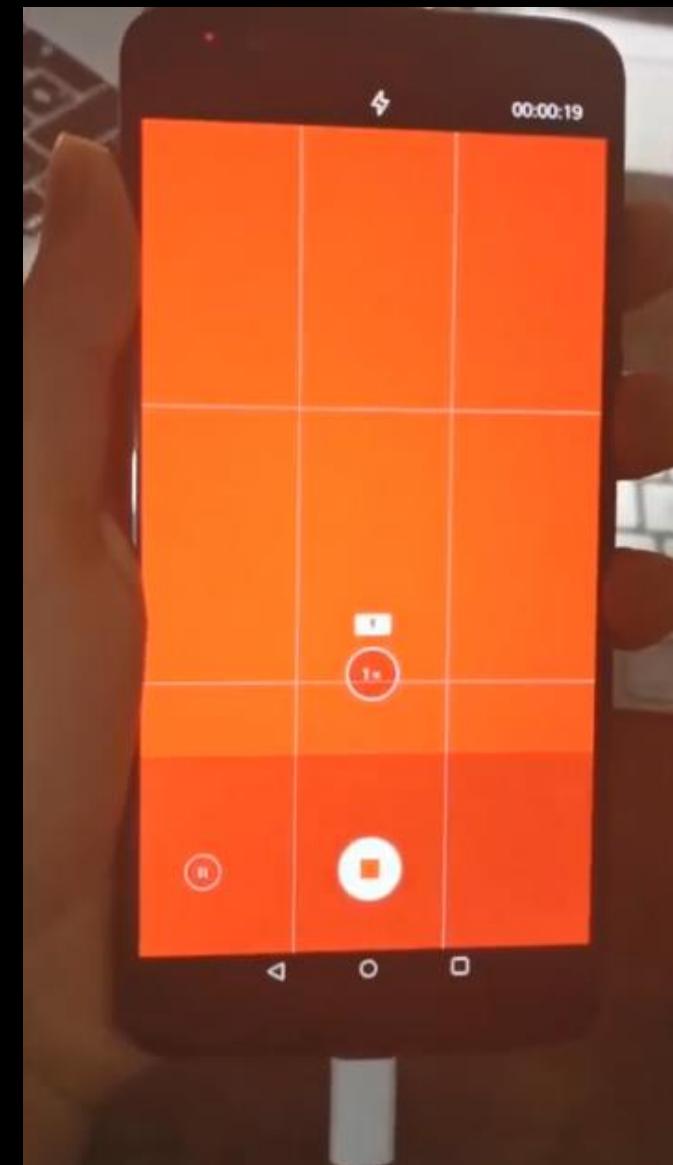

How does it work?

- Oxygen in blood cells can be calculated by the amount of infrared light absorbed by the blood cells. Fortunately, most smartphone cameras capture this infrared light and represent it in the blue color channel. Blood also absorbs red light, so by measuring the variations in the color intensity in the red and blue (for infrared) channels, we can estimate the levels of oxygen in blood. Specifically, the formula is the following:

$$SpO_2 = 100 - 5 \frac{\sigma r/\mu_r}{\sigma b/\mu_b}$$

Where μ is the mean, σ is the standard deviation; and b and r represent blue and red color channels, respectively.

Bahrain- Electronic Tracker Wristbands

Bahrain is leveraging technology to ensure that people under compulsory home quarantines do not move away from the confines of their homes.

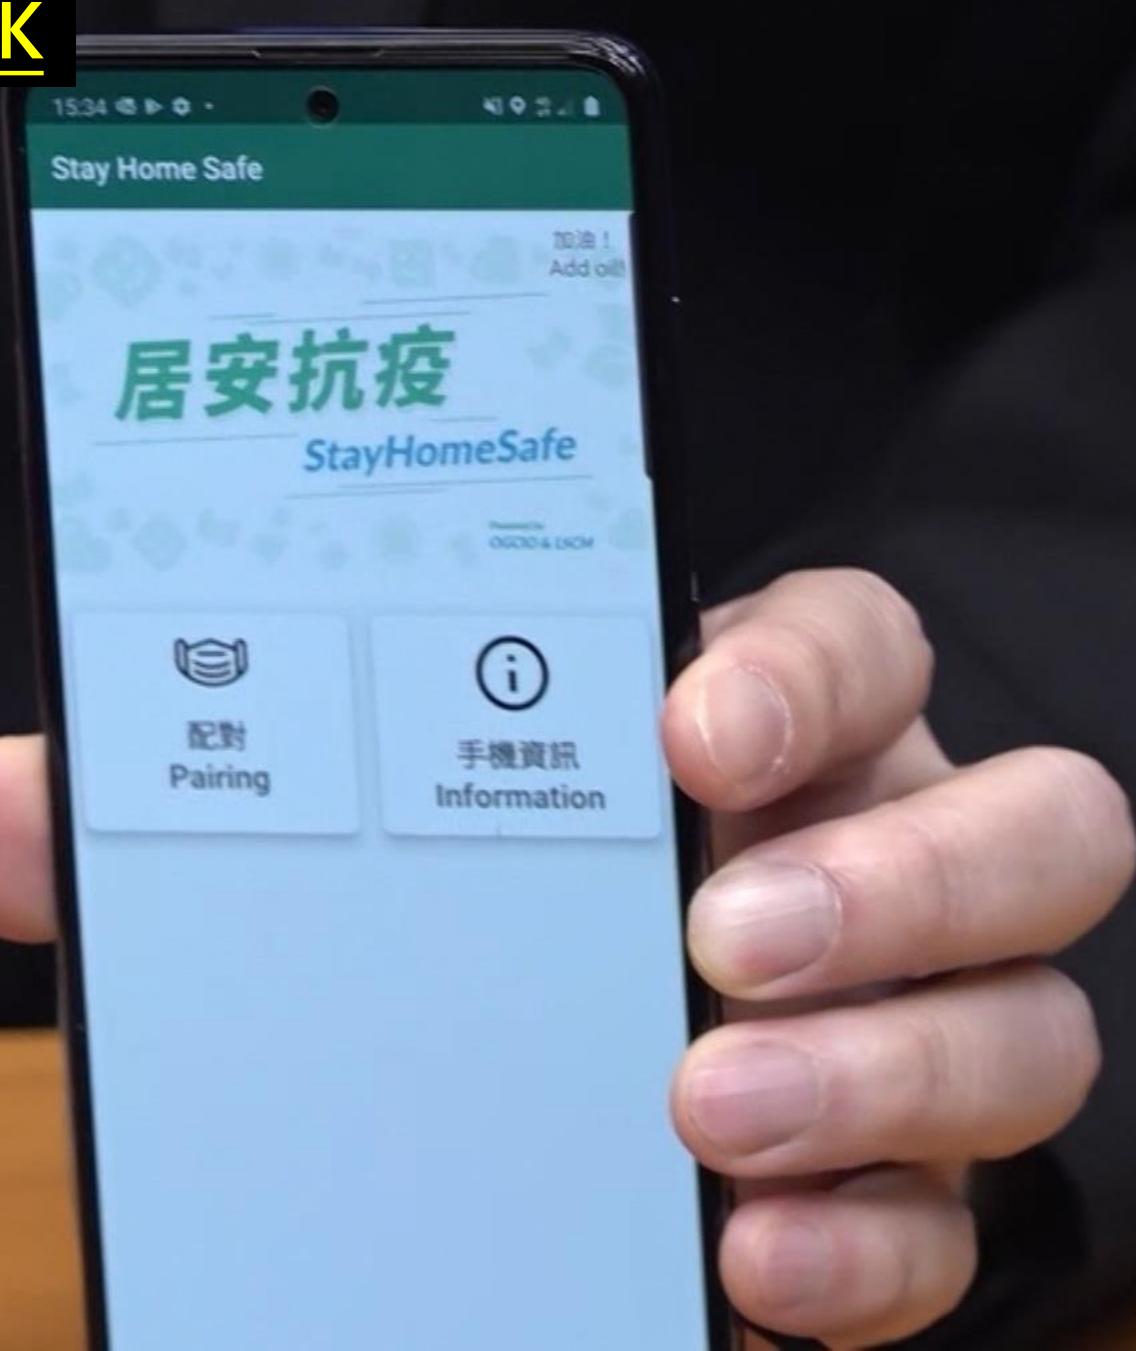

The electronic bracelet that will notify the monitoring station when they are 15 meters away from their phone.

Attempting to remove or tamper with the bracelet is a violation. Violators will face legal penalties as per Public Health Law No. 34.

Electronic Tracker Wristbands in HK

Electronic wristbands developed by the Logistics and Supply Chain MultiTech R&D Centre (LSCM)

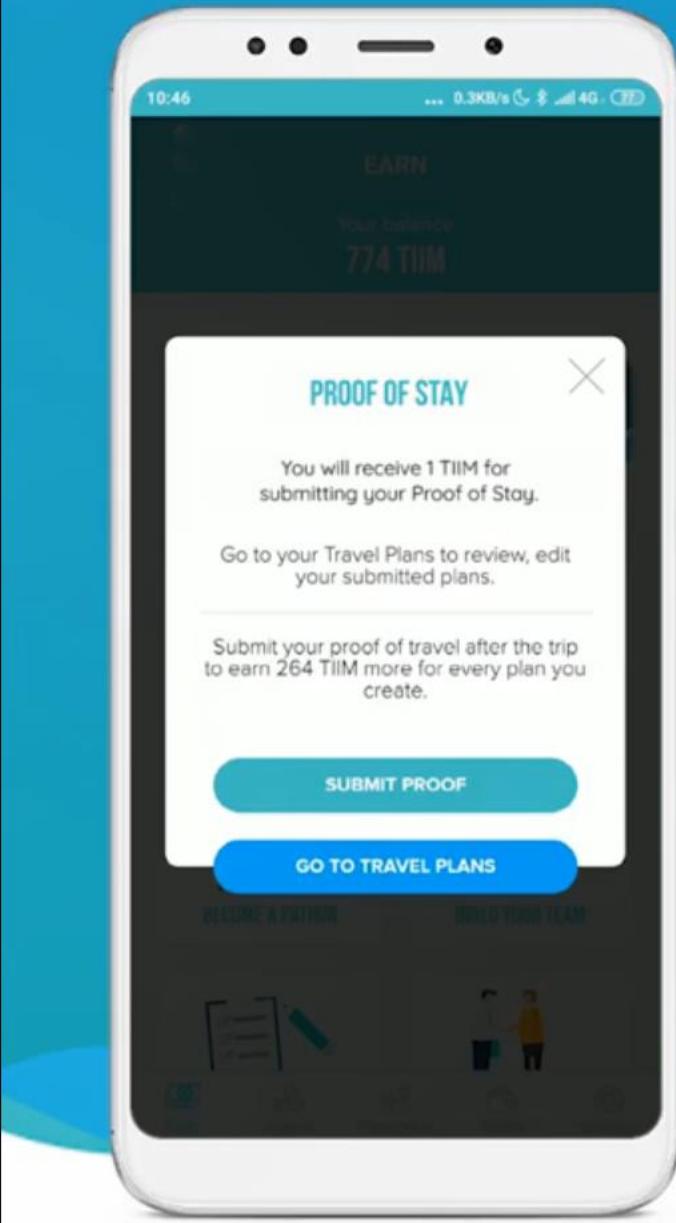

StayHomeHeros

The platform is built based on a strong and fast blockchain infrastructure.

The app has been tested with more than 160,000 users in 131 countries.

Users submit a Proof of Stay (photo of staying home) each day so we can reward the user with our TriipMiles token.

Users can use these TriipMiles token to pay for accommodations, tours, and experiences in 229 countries later.

You can earn TIIM with a PROOF OF STAY :

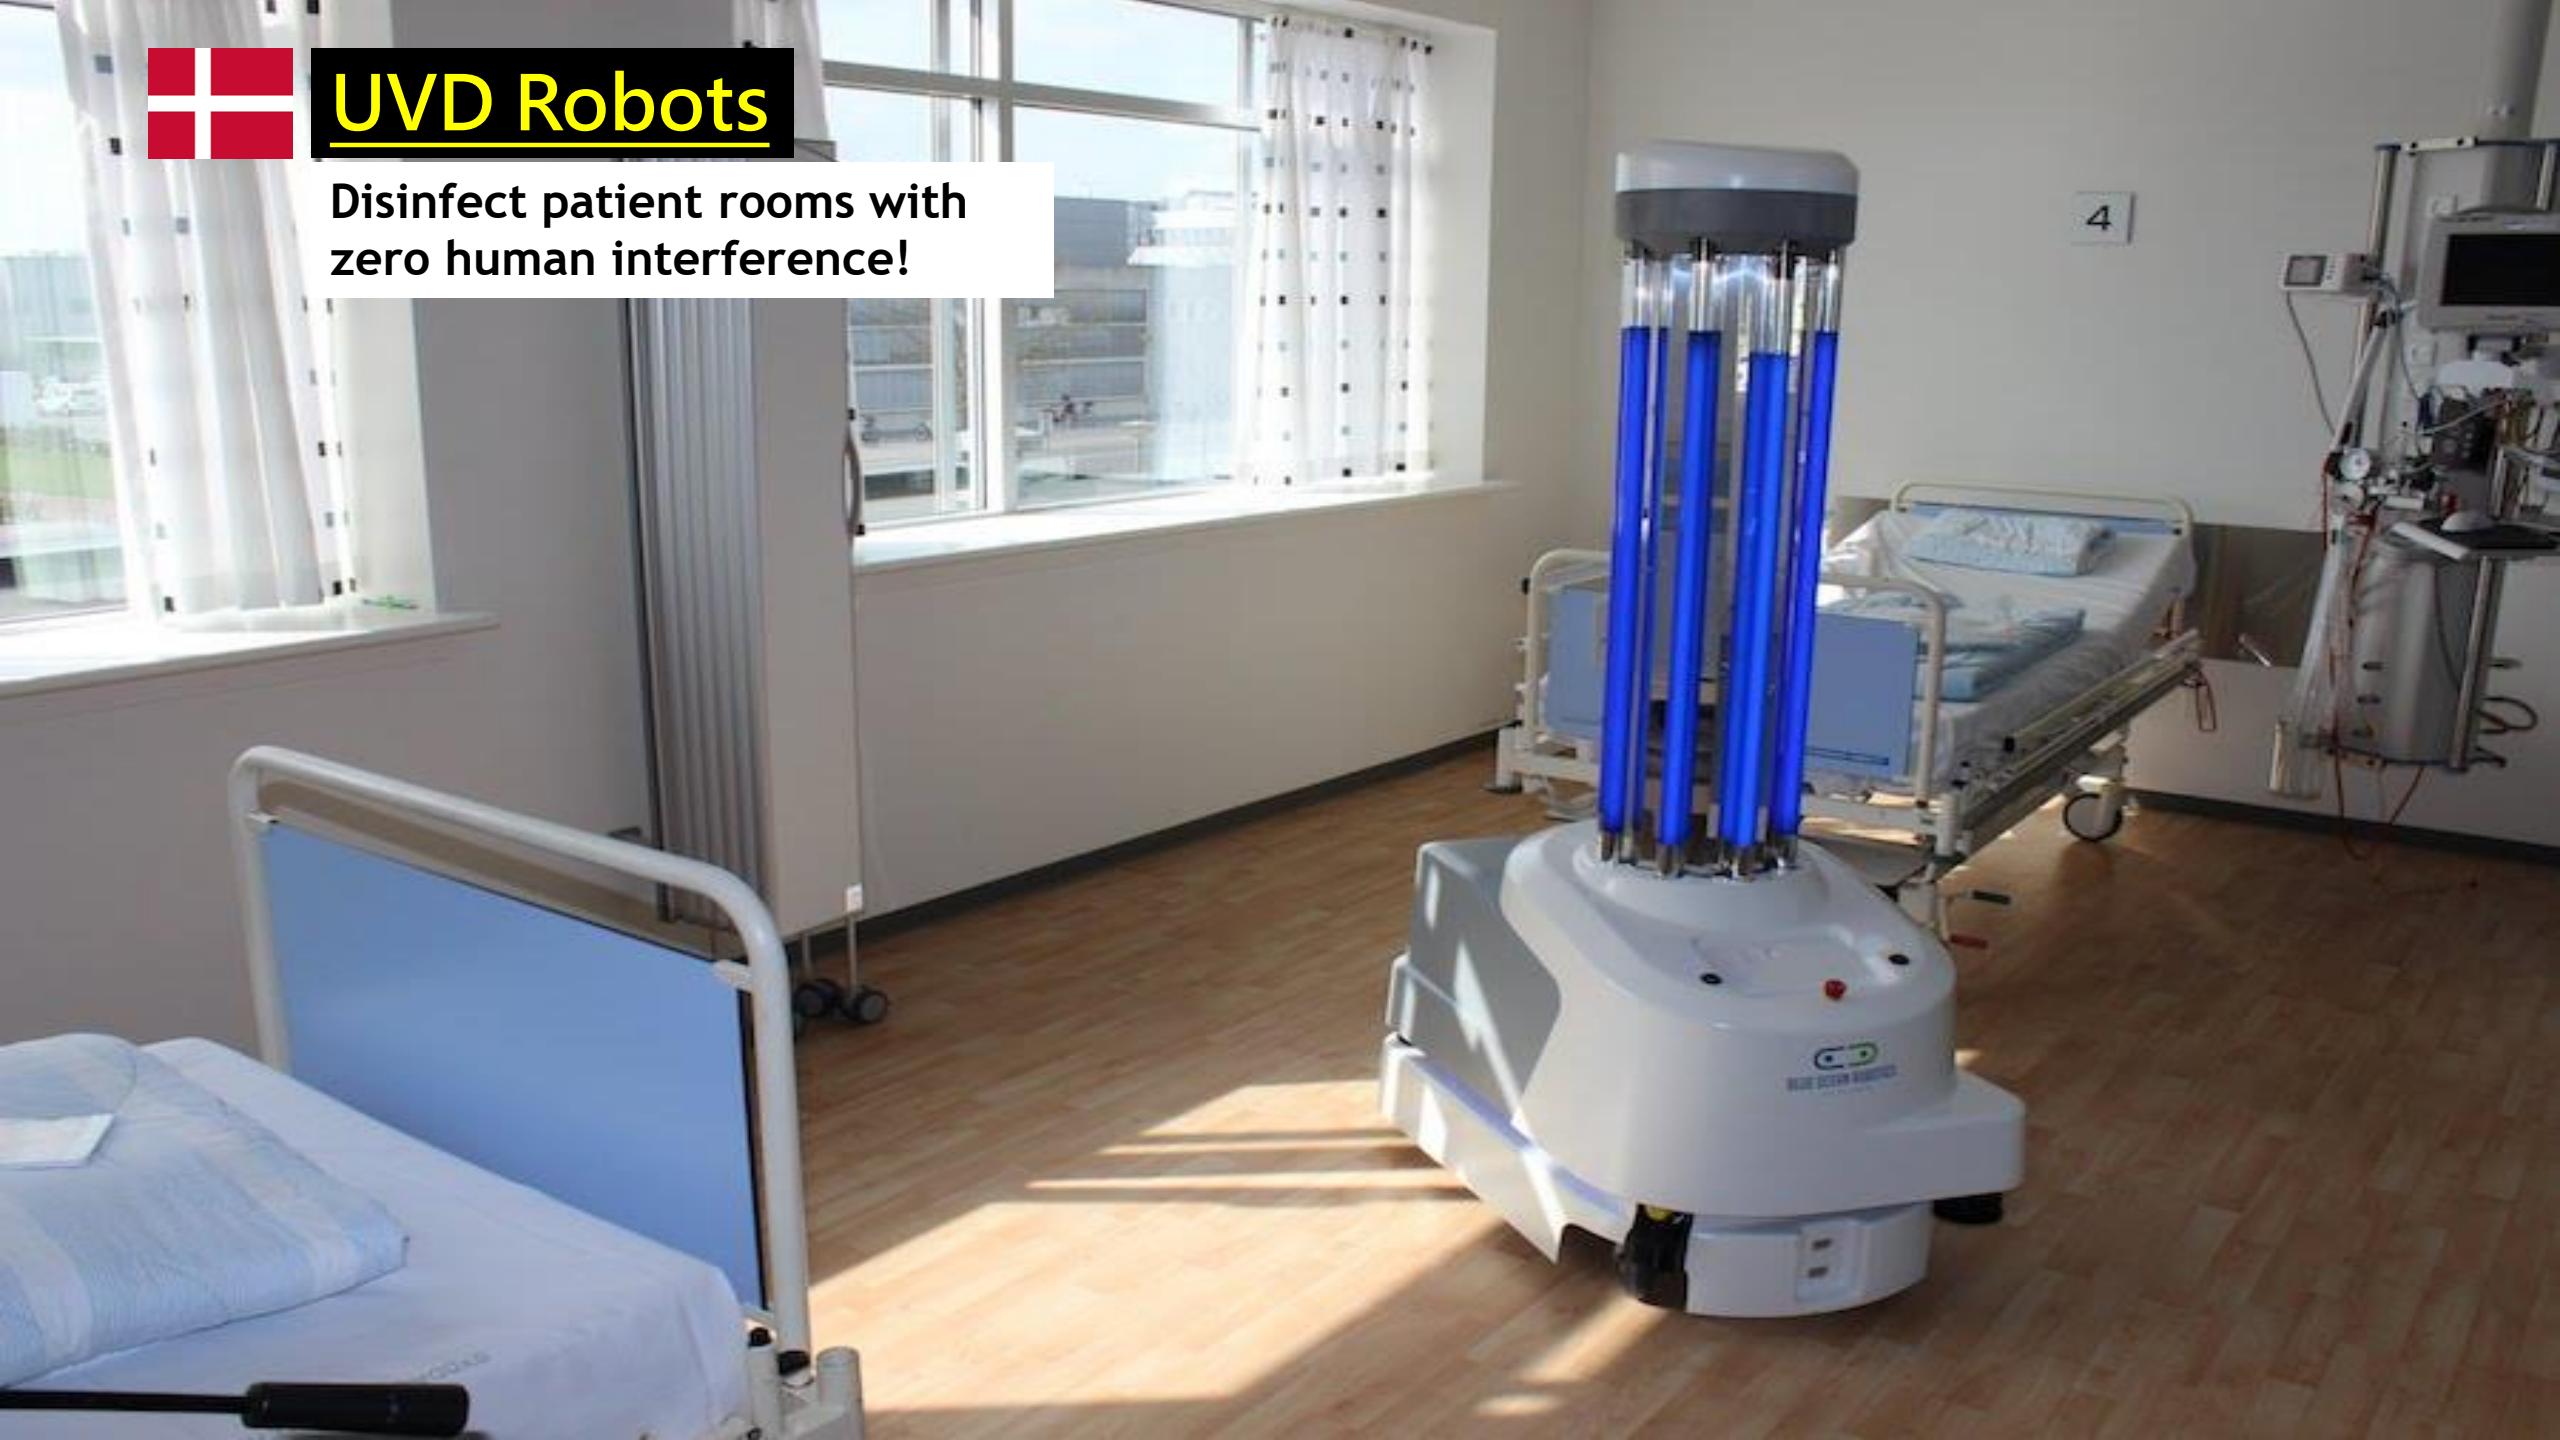

**+1 TIIM ~ US\$0.015
for submitting a Proof of Stay daily**

+ Use TIIM to pay for accommodations, tours and experiences in countries around the world

UVD Robots

Disinfect patient rooms with
zero human interference!

Drones To The Rescue

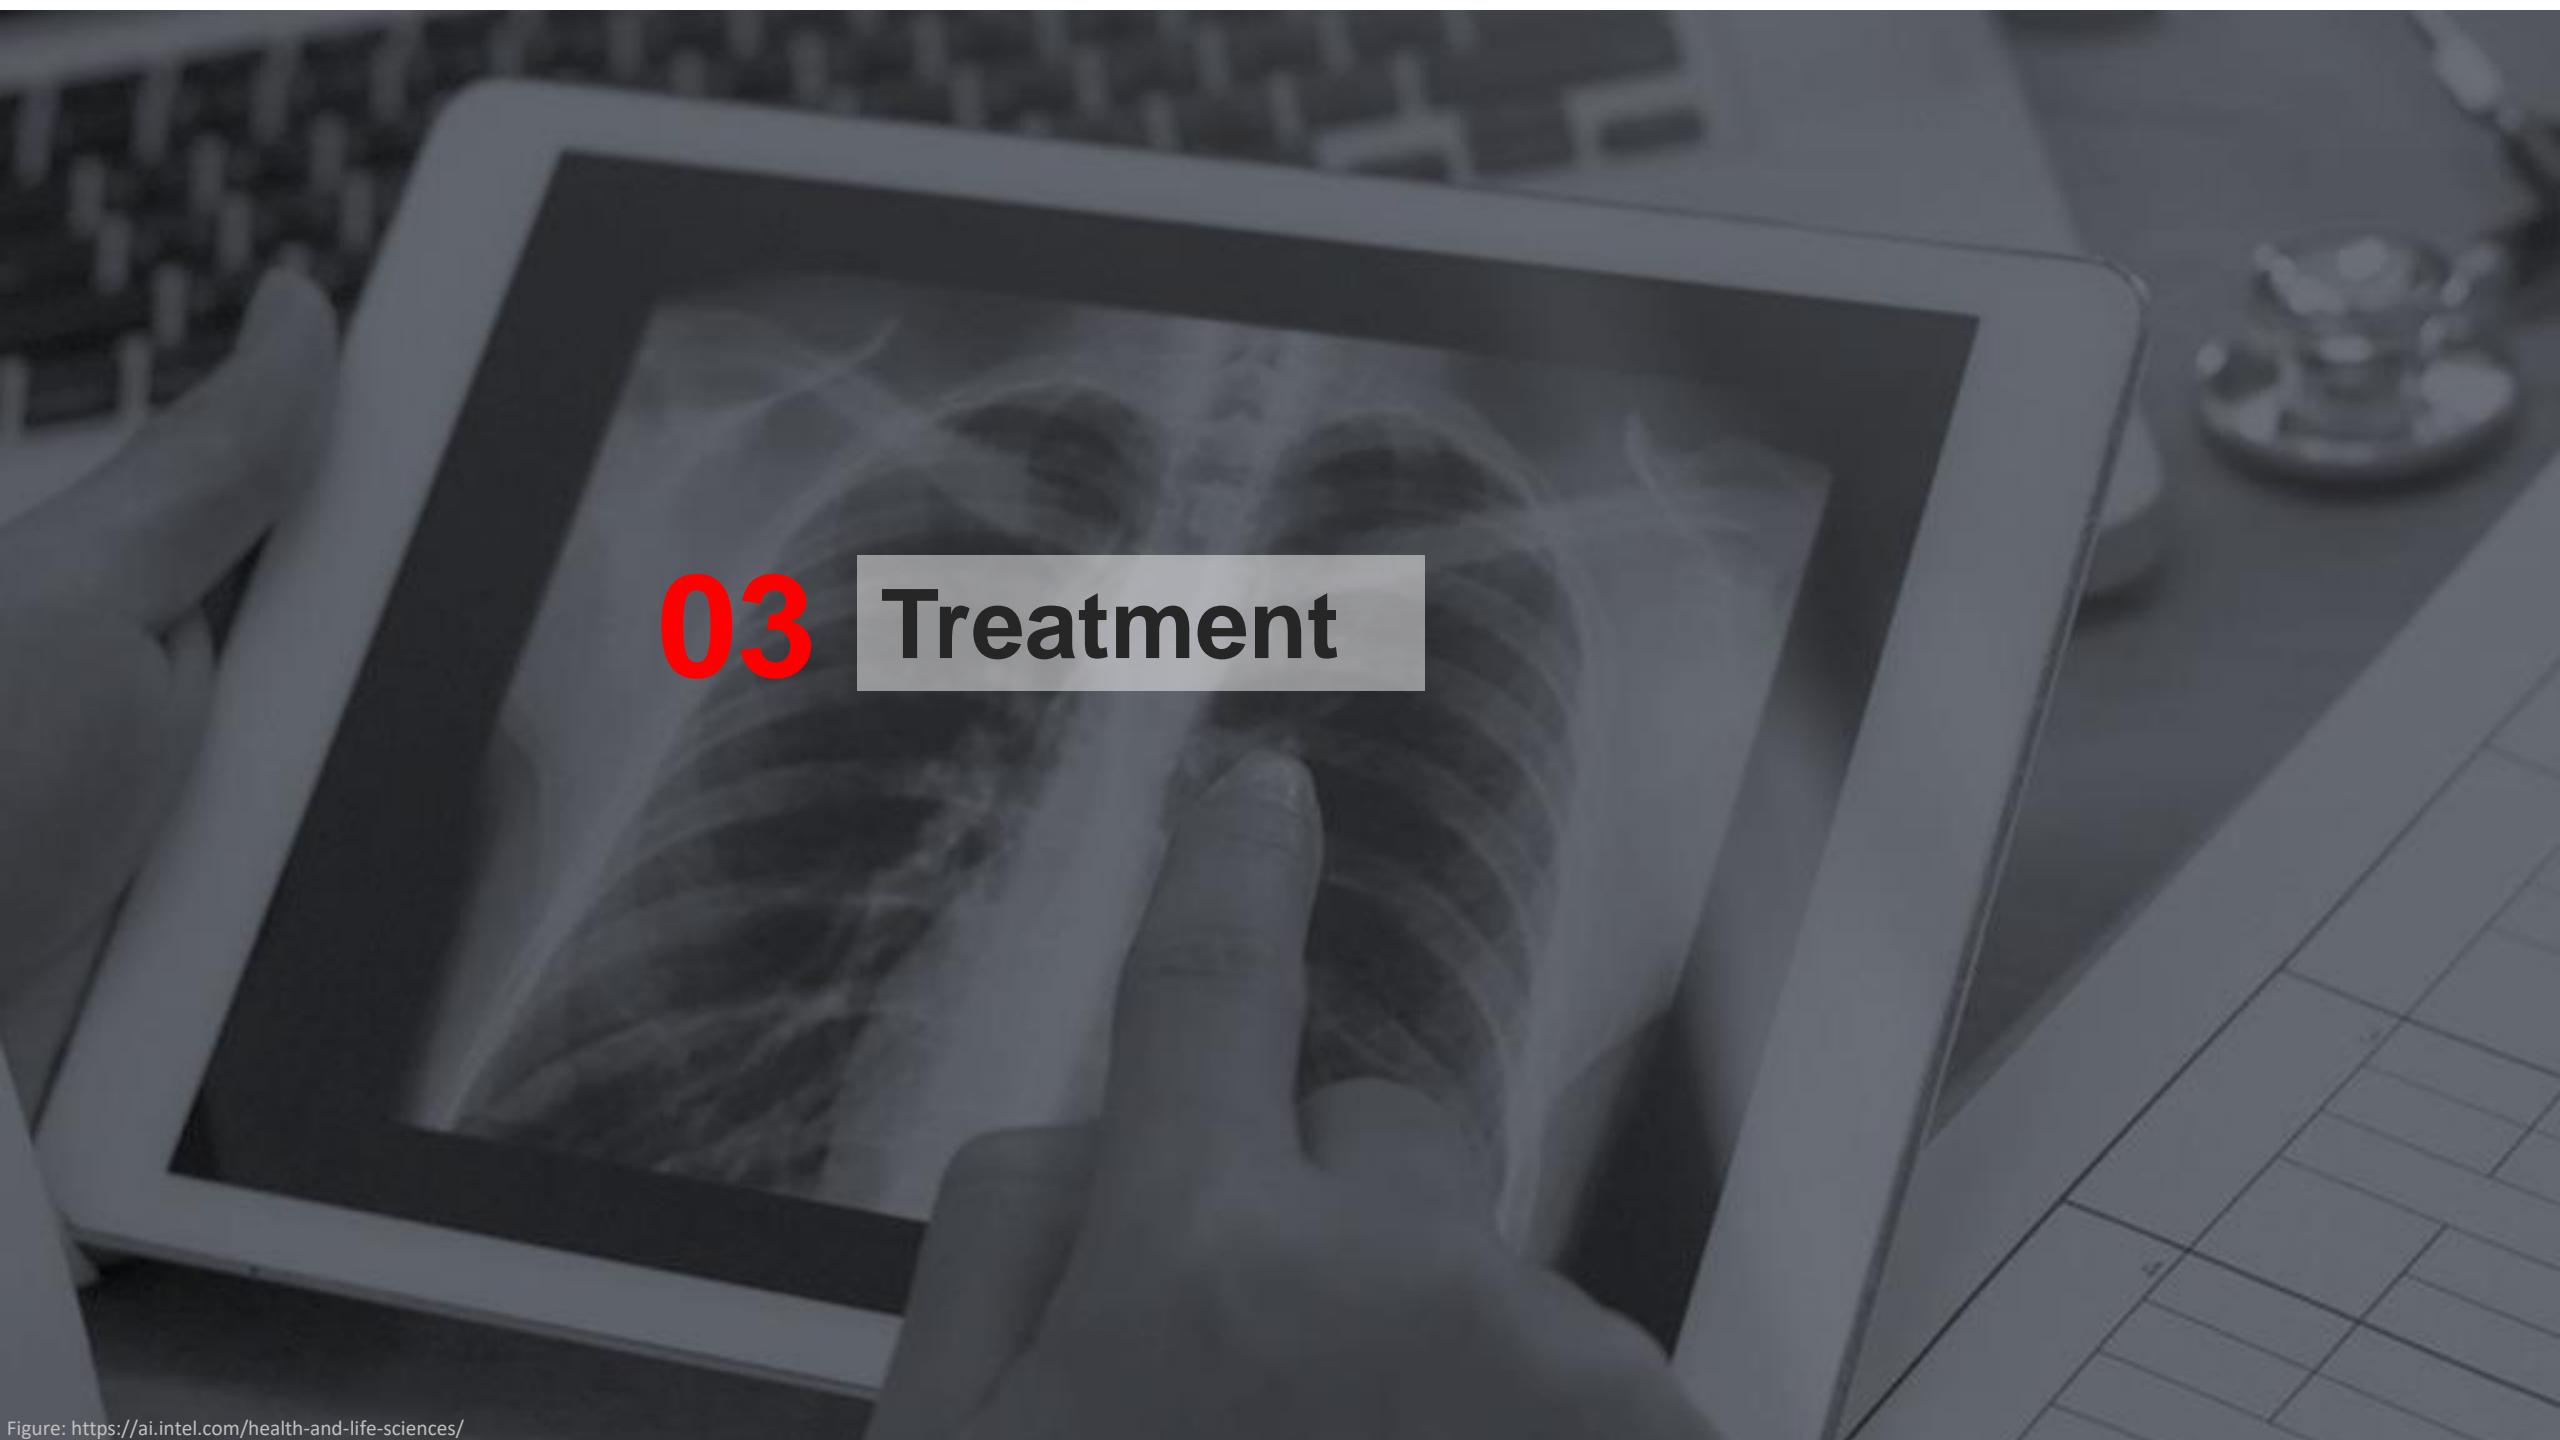

Pudu Technology and MicroMultiCopter are deploying drones to transport medical supplies for 40 hospitals and conduct thermal imaging.

Autonomous vehicles carry out non-contact tasks

minimizing person-to-person transmission and alleviating the shortage of medical staff

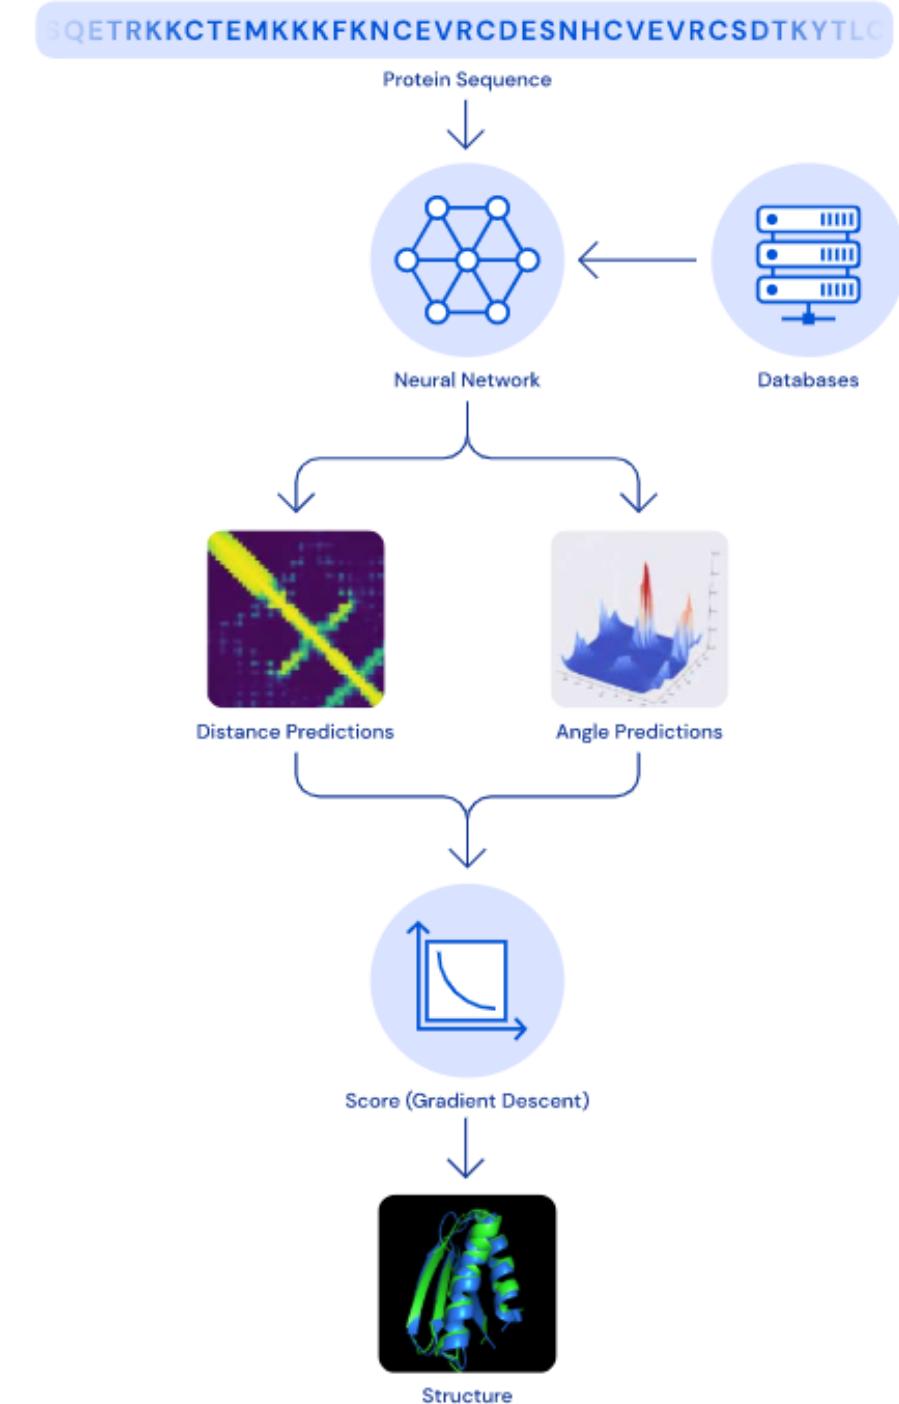

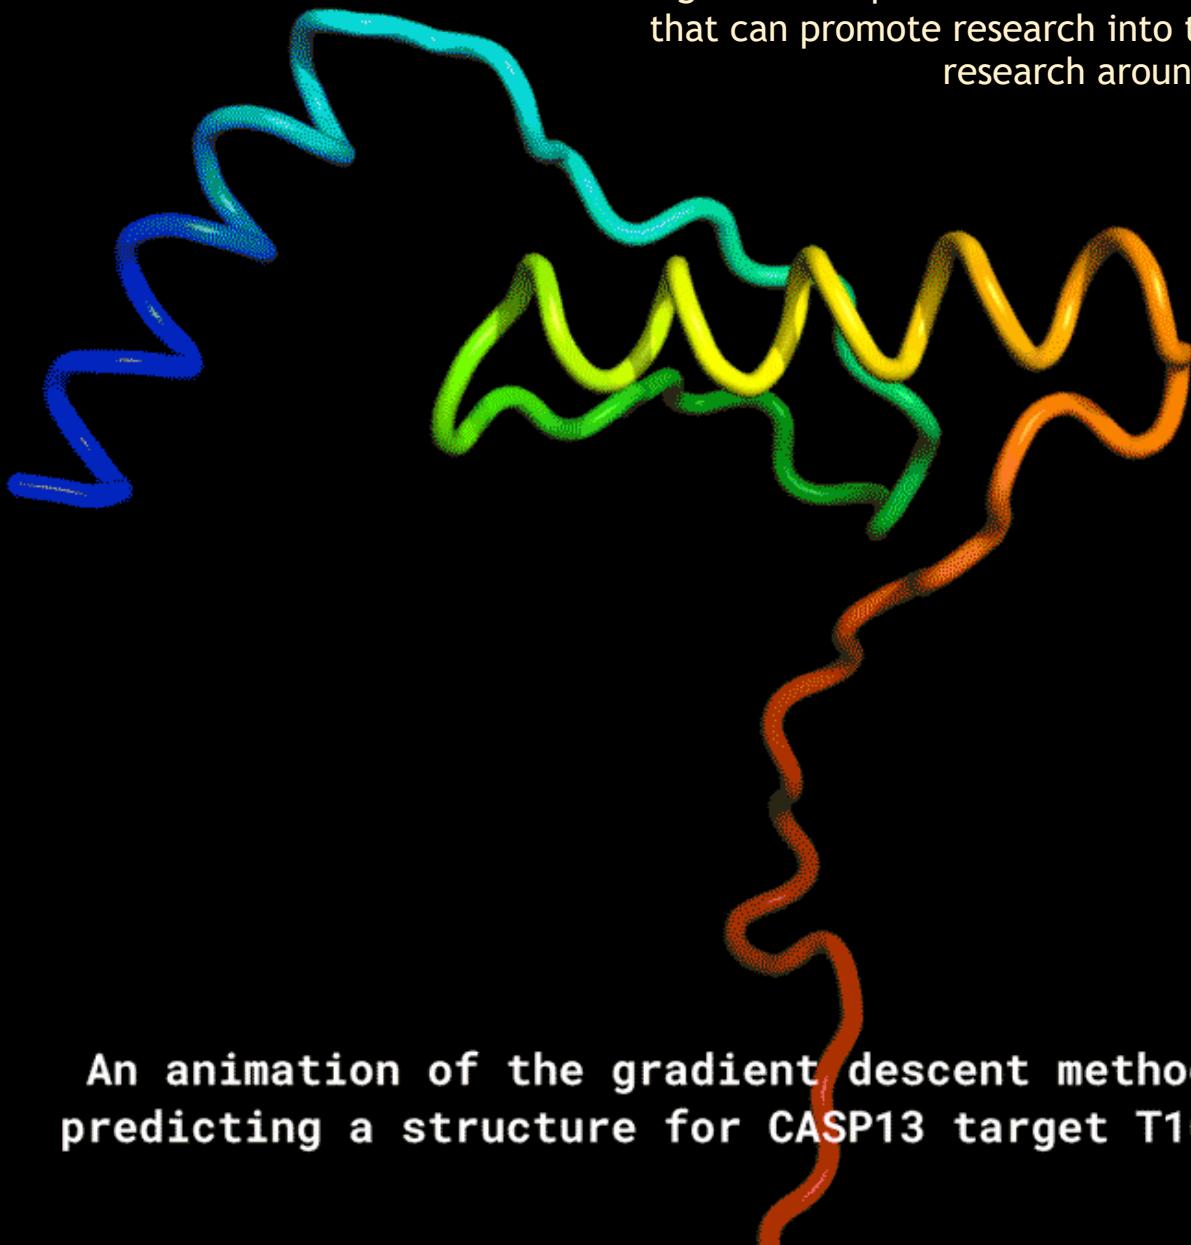

03 Treatment

DeepMind (AlphaFold System)

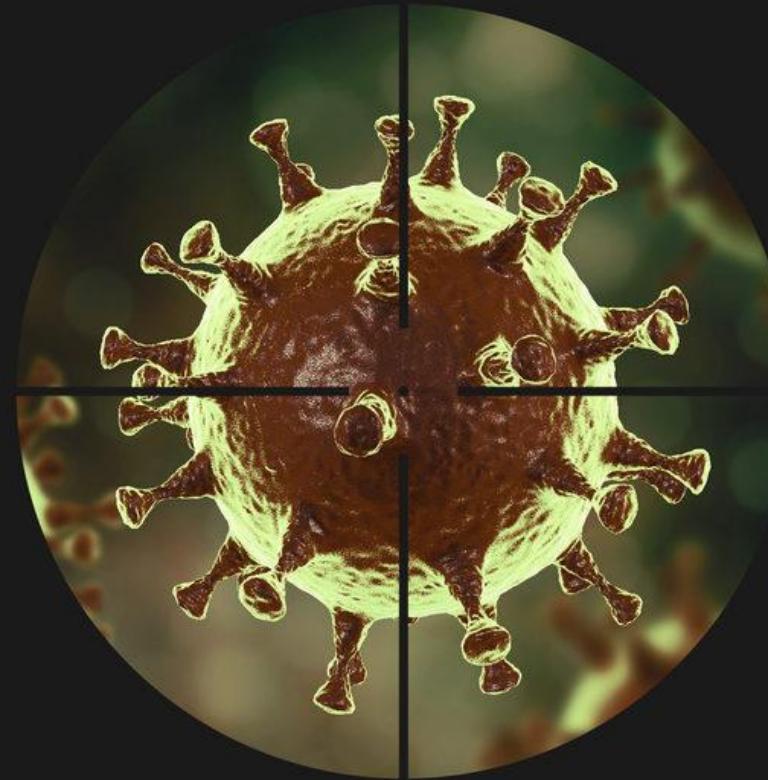

releasing structure predictions of several proteins
that can promote research into the ongoing
research around COVID-19

INSILICO MEDICINE

TO SUPPORT
THE DRUG DISCOVERY EFFORTS

AGAINST
CORONAVIRUS 2019-nCoV

Using generative adversarial networks GANs to filter the molecule designs.

Insilico Medicine selected up to 100 molecules to be synthesised and tested.

Potential 2019-nCoV 3C-like protease inhibitors designed using generative deep learning approaches

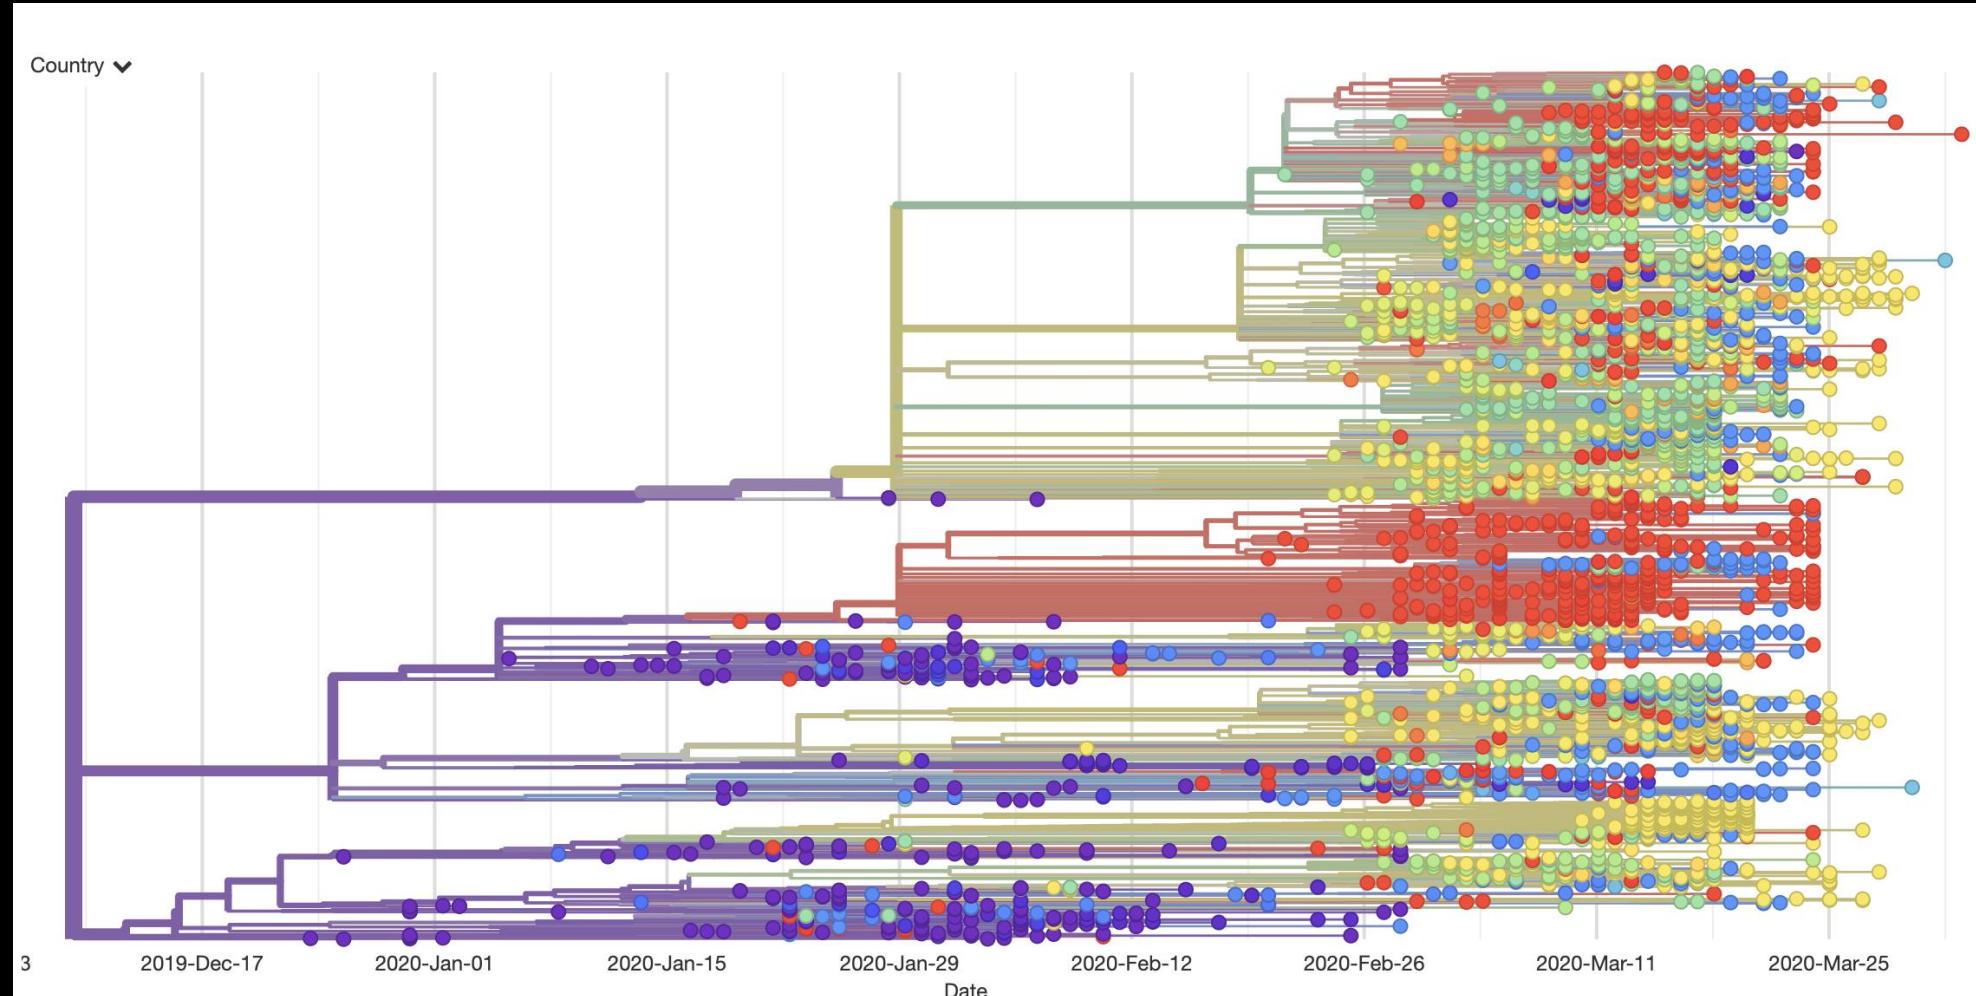

Alex Zhavoronkov, Vladimir Aladinskiy, Alexander Zhebrak, Bogdan Zagribelnyy, Victor Terentiev, Dmitry S. Bezrukov, Daniil Polykovskiy, Rim Shayakhmetov, Andrey Filimonov, Philipp Orekhov, Yilin Yan, Olga Popova, Quentin Vanhaelen, Alex Aliper, Yan Ivanenkov

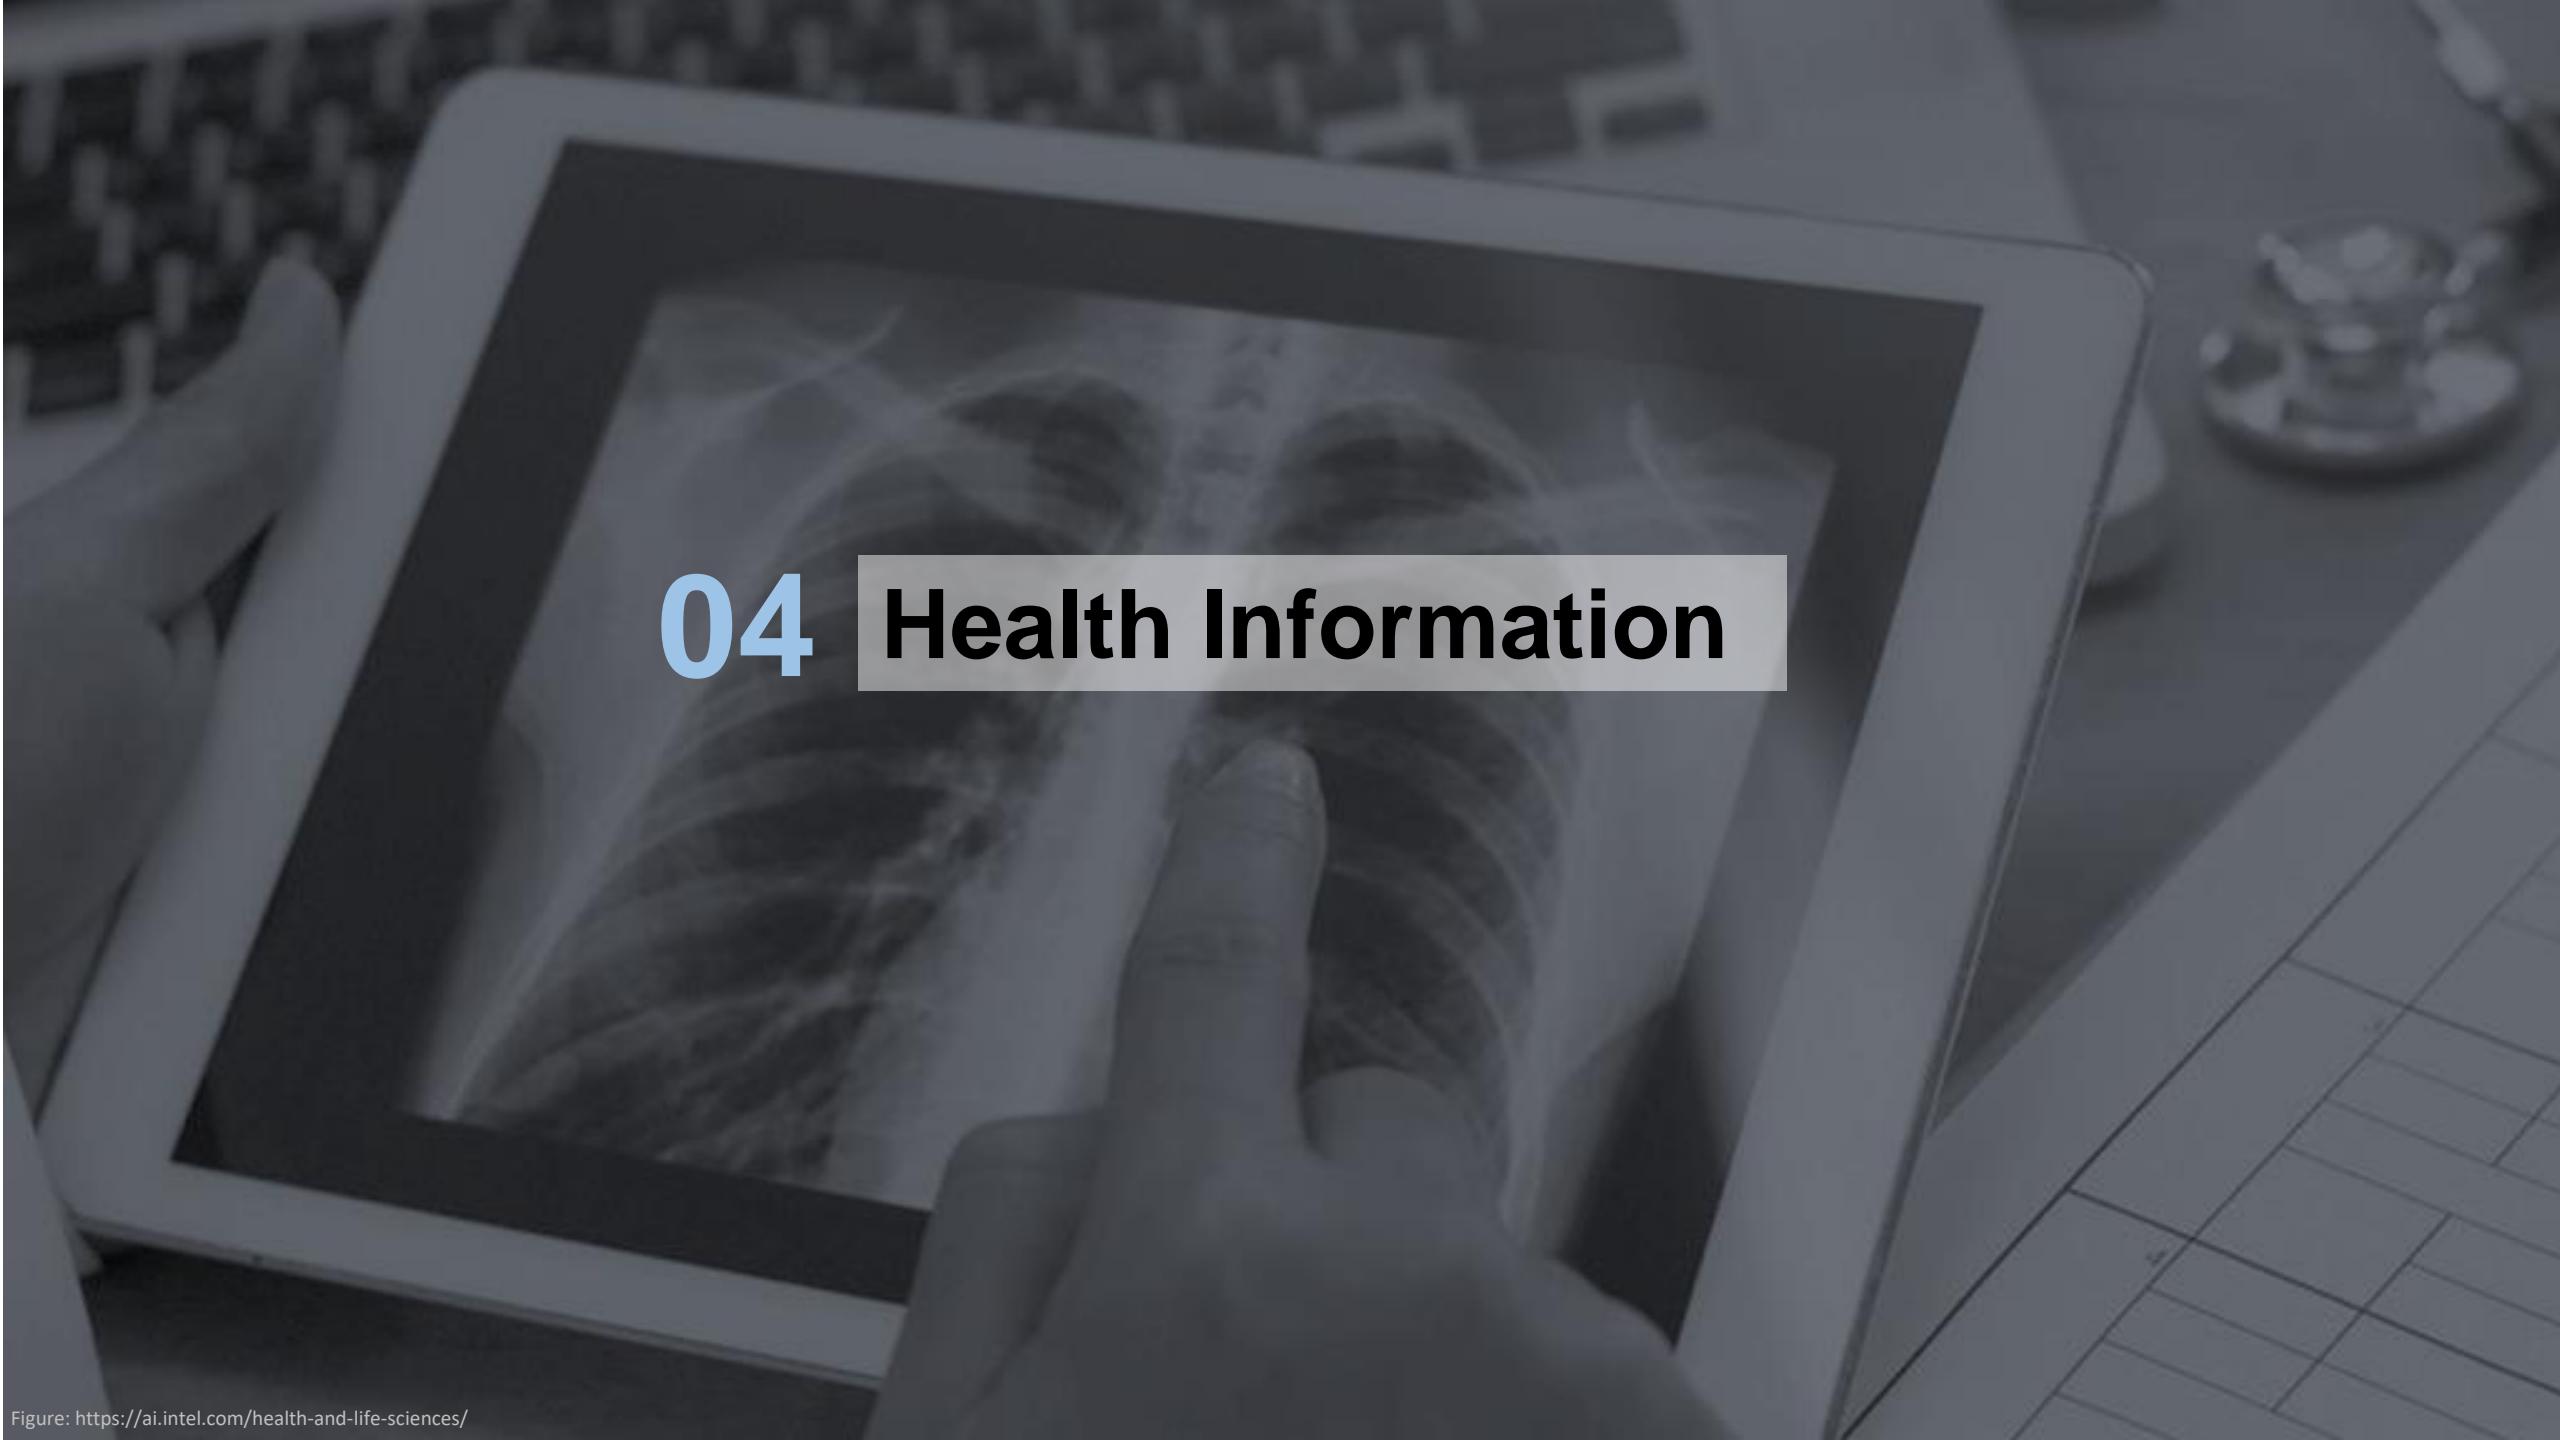

Insilico Medicine Hong Kong Ltd, Pak Shek Kok, New Territories, Hong Kong

Computational Accelerated Reverse Vaccinology

Using Covid-19 strains, develop a model to predict COVID-19 mutation process.

Using the predicted strains, narrow down the reverse vaccination problem space by predicting PPI (protein-protein interaction) and thereby shorten the vaccine development process.

04 Health Information

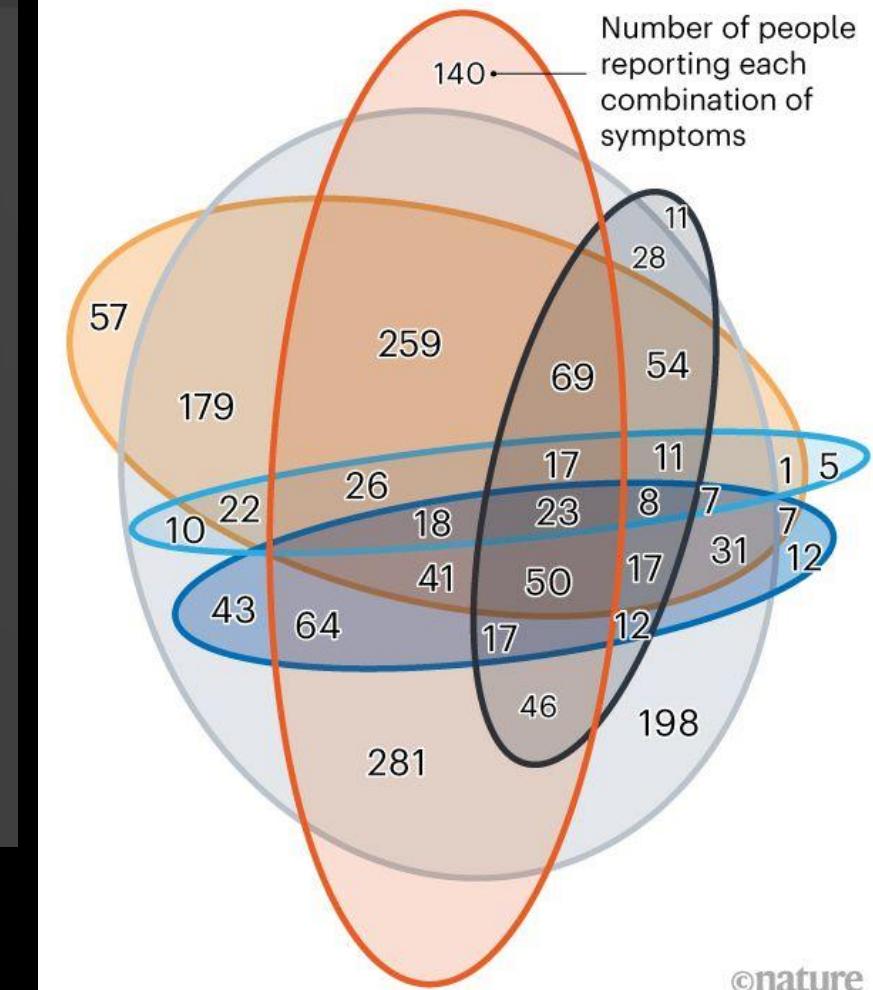

COVID-19 Daily Symptom Tracker for all

TRACKING SYMPTOMS

On 7 April, around 60% of app users who tested positive for COVID-19 and reported symptoms had lost their sense of smell.

— Anosmia (loss of smell) — Cough — Fatigue
— Diarrhoea — Shortness of breath — Fever

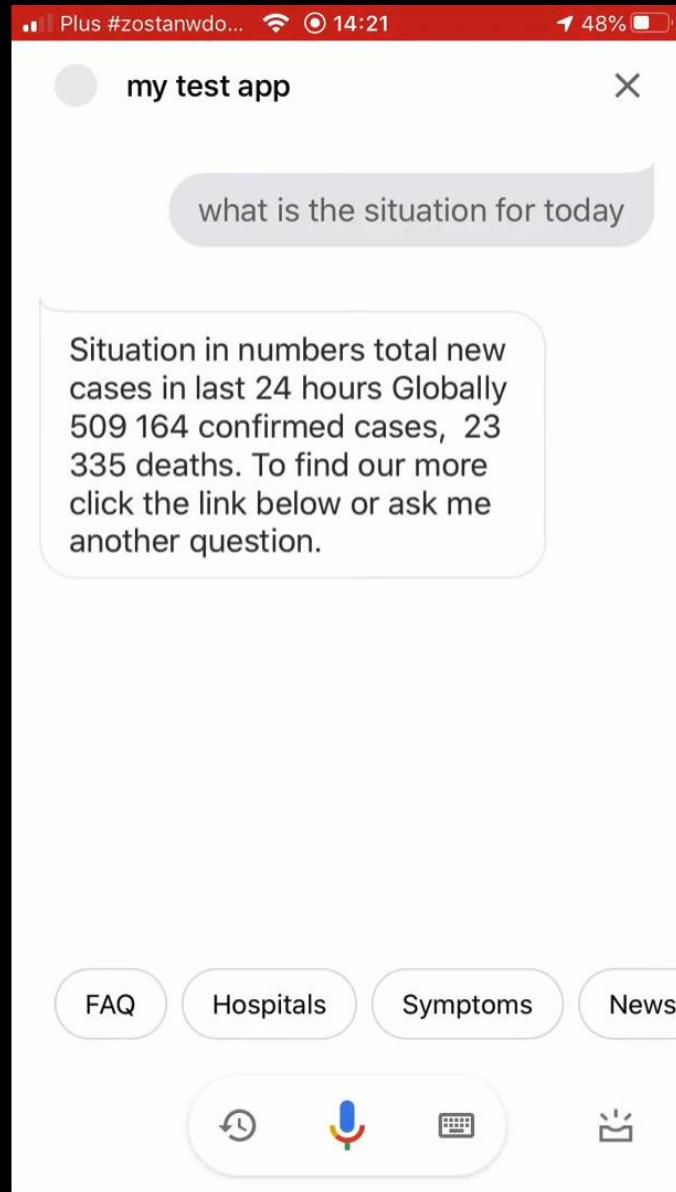

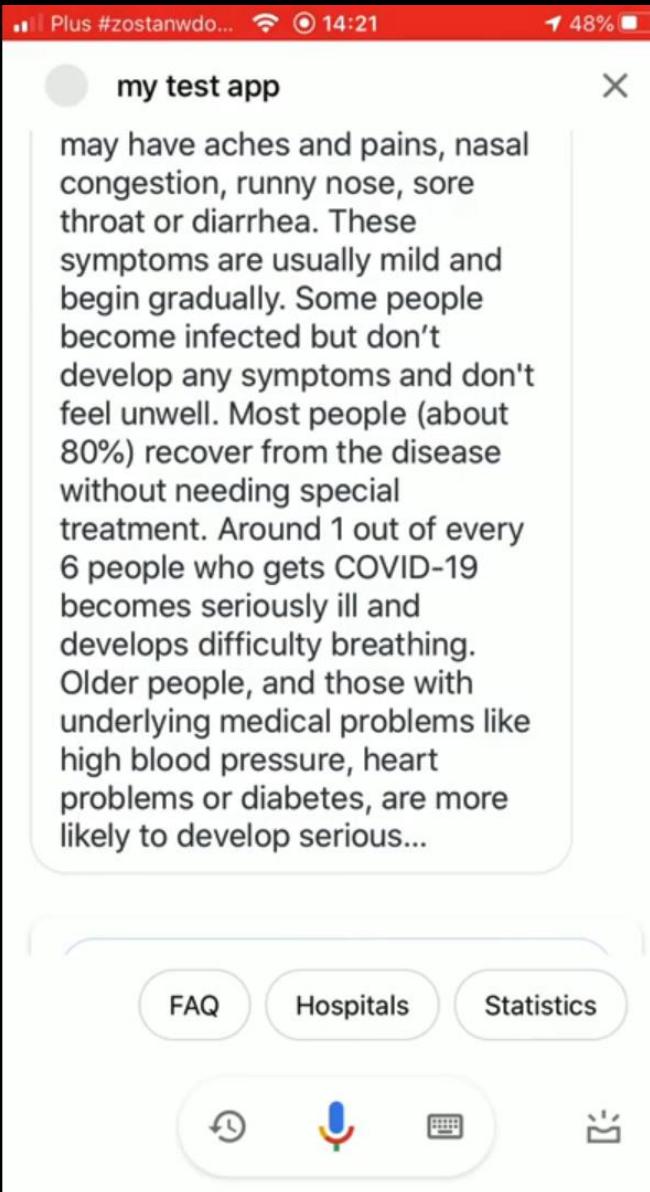

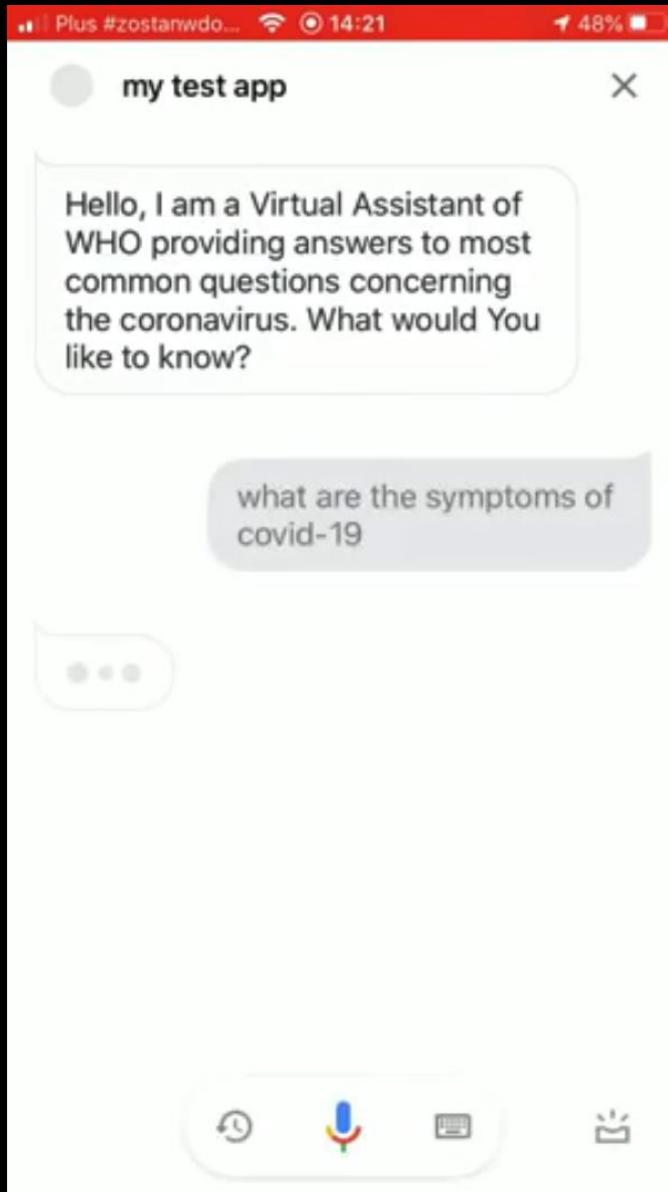

ASK NAMESSA

A Conversational AI about COVID-19,

The team have used AI powered NLP (Arabic and Latin based languages) engine to provide better healthcare decisions.

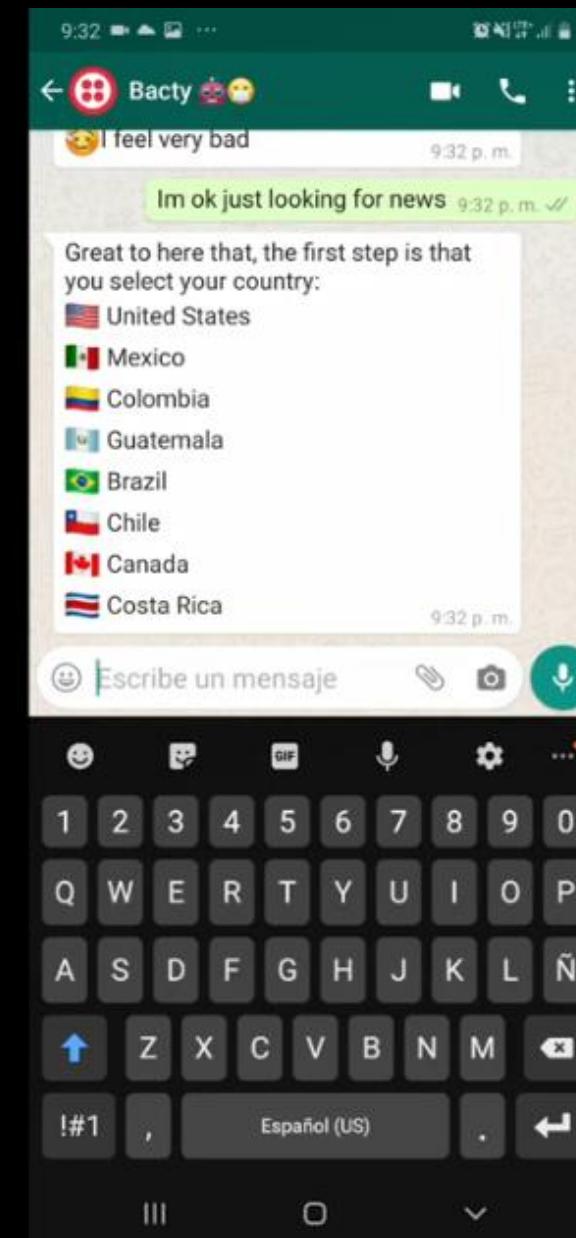

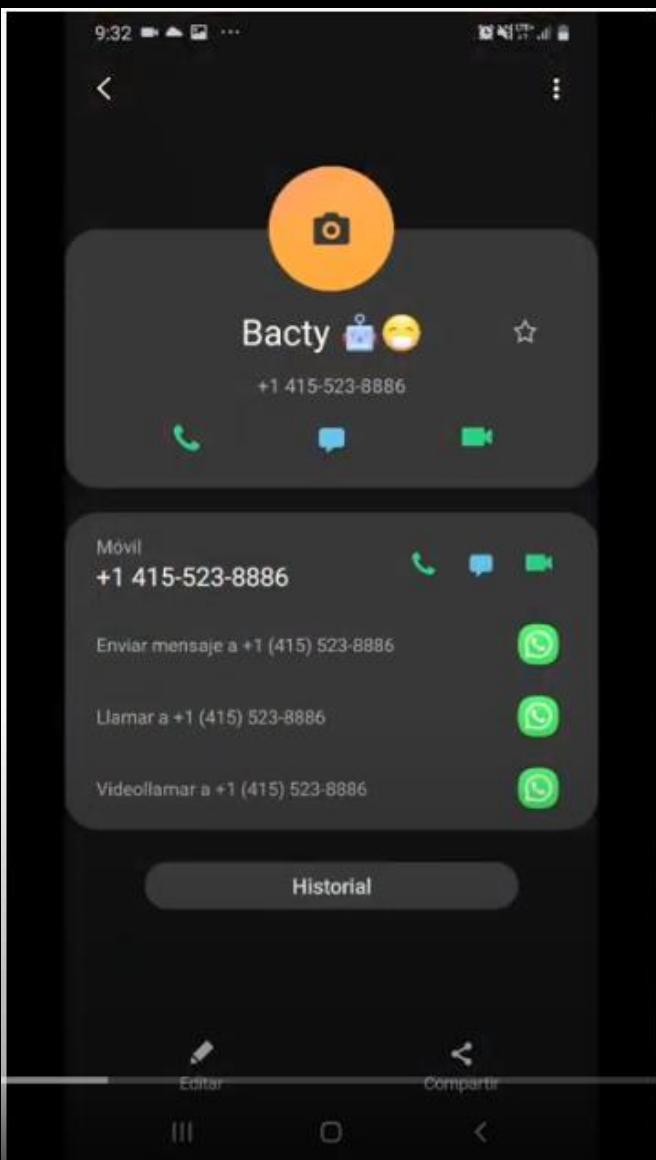

Voice & Text AI Virtual Assistant- Coronavirus Info

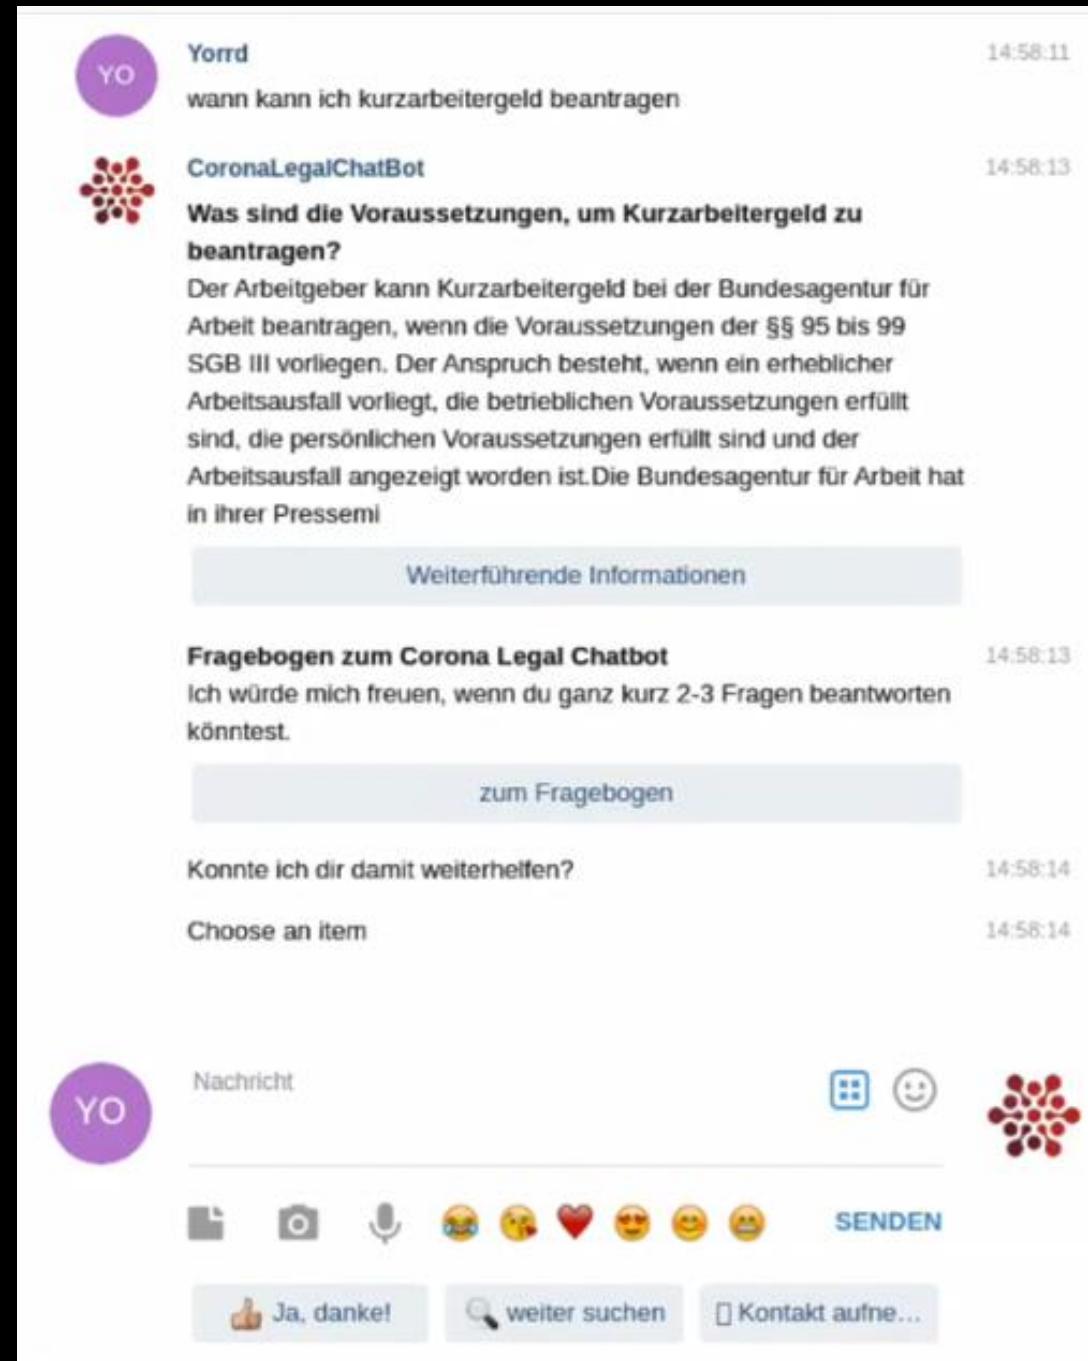

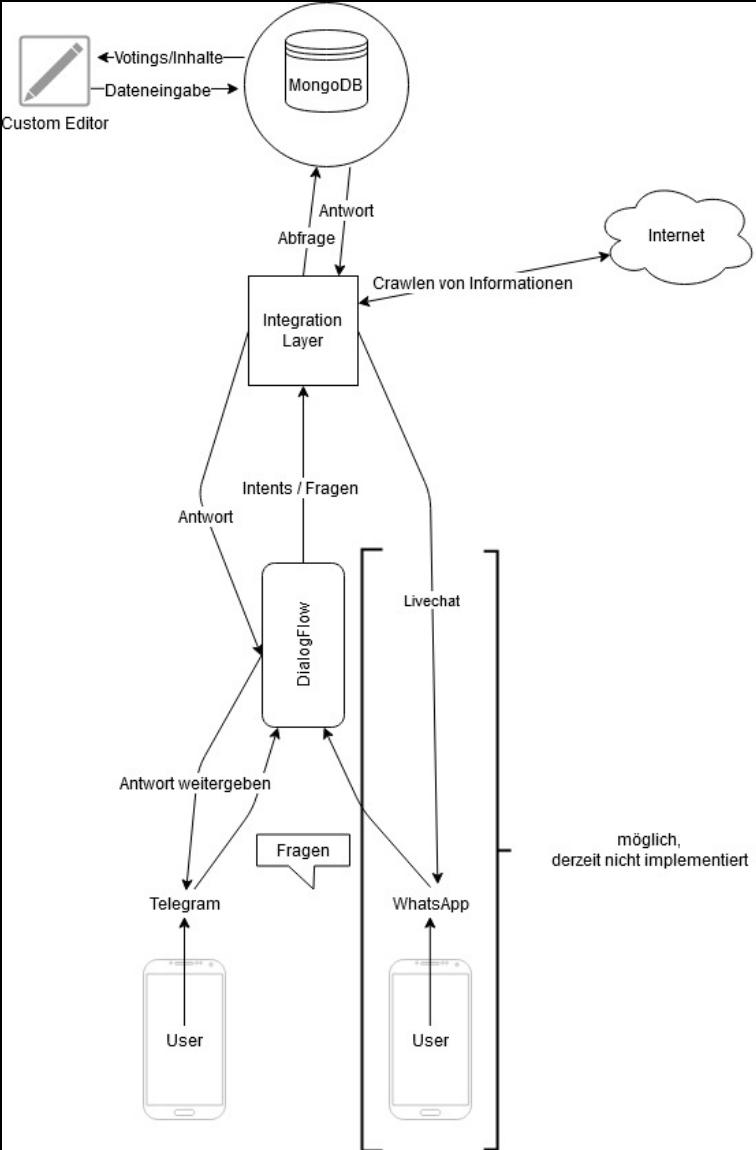

BACTY BOT

Connect volunteer health Professionals and possible COVID19 patients through Whatsapp & Messenger

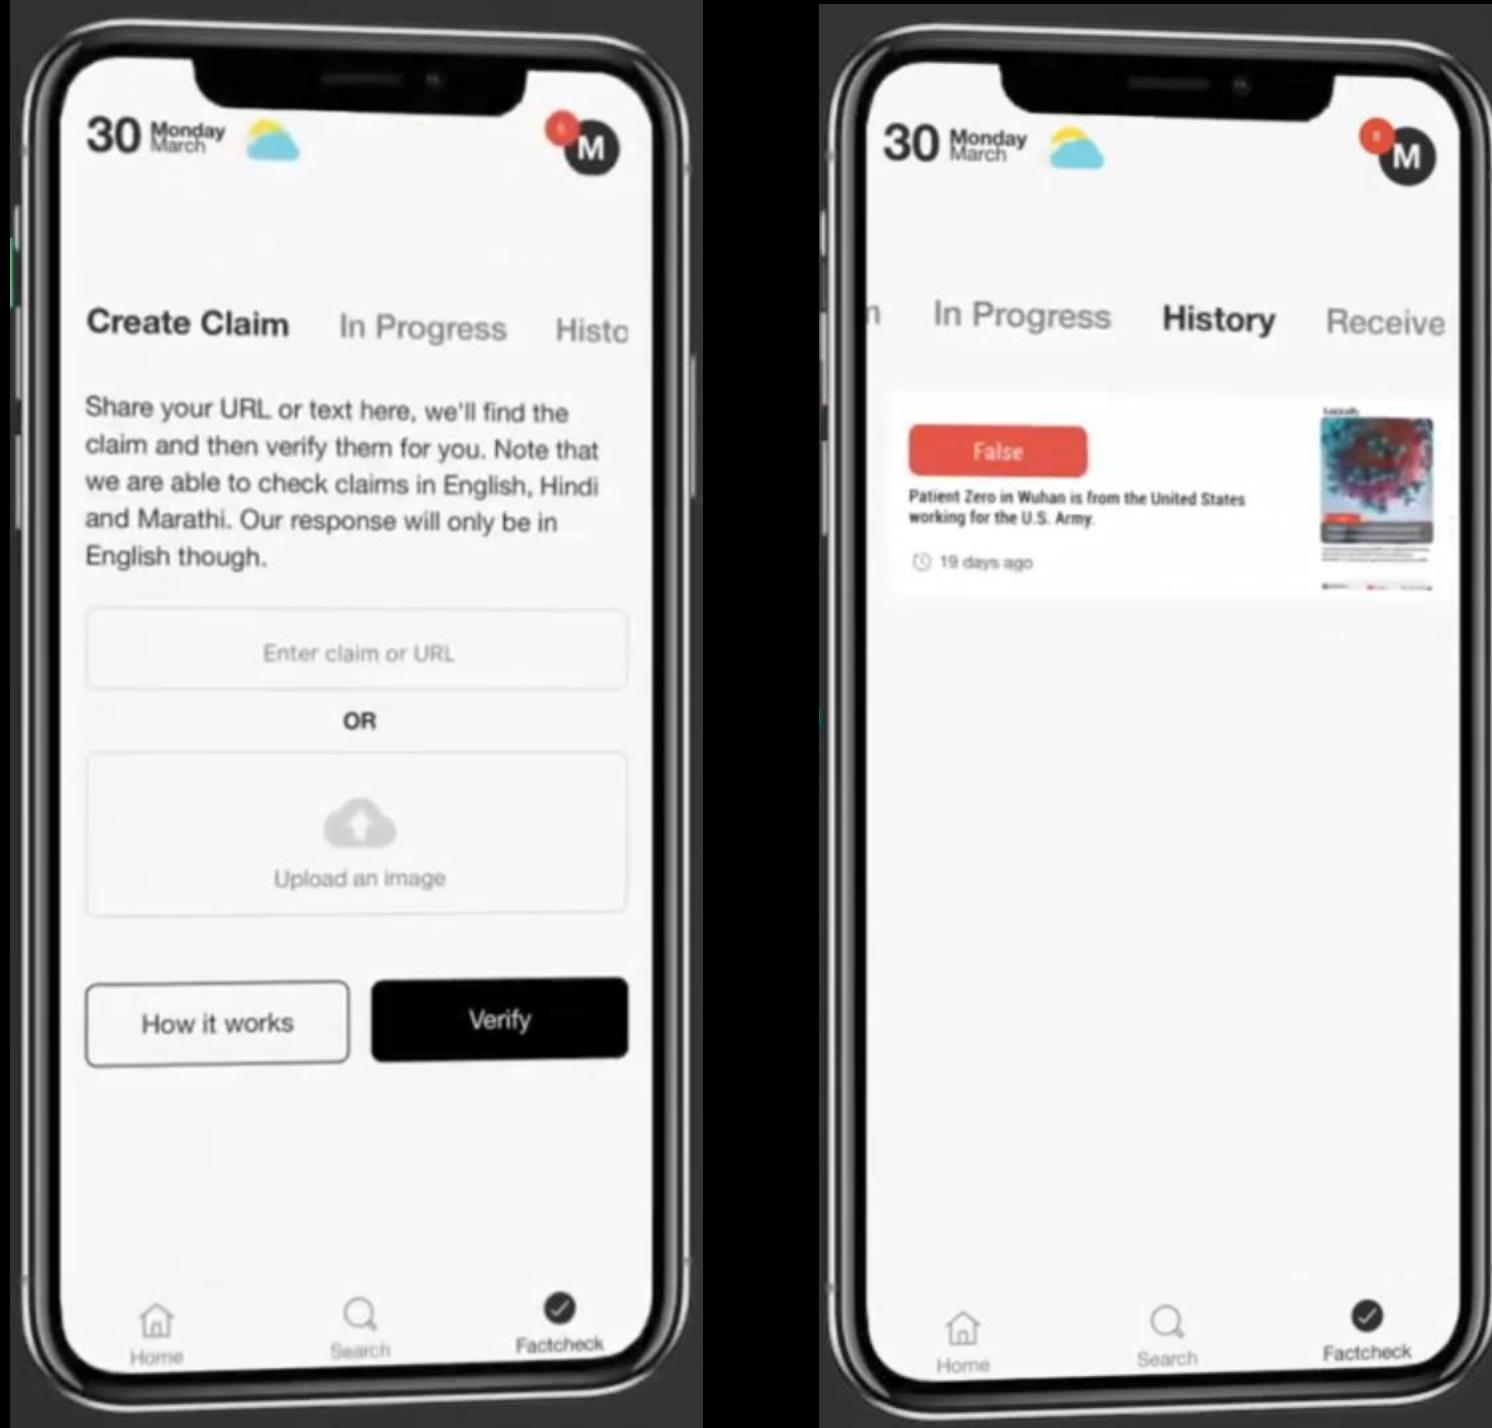

CORONA LEGAL CHATBOT

Place to go to for all legal questions concerning Corona.

THINKLOGICALLY

The team have developed an hybridised process which supports the development of our fact-checking algorithms, enables the incremental adoption of our automated fact-checking technology as it matures, and enables efficient and high-quality fact-checking in the meantime.

COLLABOVID

Simplify exploring preprint publications regarding the coronavirus.

The screenshot shows the COVID-19 SARS-CoV-2 Preprint Explorer interface. At the top, there is a search bar with "Italy" typed in, a date range selector for "Publication Date", and a "Sort by" dropdown set to "Newest". To the right, there is a "Choose a category:" dropdown menu with a list of categories: Allergy and Immunology, Anesthesia, Biochemistry, Bioengineering, Bioinformatics, and Biophysics. A green "+" button is located next to the dropdown. Below the search bar, a specific preprint is highlighted: "Site-specific N-glycosylation Characterization of Recombinant Spike Proteins using High-Resolution Mass Spectrometry" by Yong Zhang, Wanjun Zhao, Yonghong Mao, Shisheng Wang, et al. The abstract discusses the characterization of the spike protein's glycosylation sites. To the right of the preprint details is a line graph titled "Cases in Italy" showing the cumulative number of cases over time, with major ticks at 0, 50k, and 100k.

Site-specific N-glycosylation Characterization of Recombinant Spike Proteins using High-Resolution Mass Spectrometry

Biochemistry · Yong Zhang, Wanjun Zhao, Yonghong Mao, Shisheng Wang, et al.

The global pandemic of severe acute pneumonia syndrome (COVID-19) caused by SARS-CoV-2 has led to significant challenges in diagnosis, prevention, and intervention strategies. The densely glycosylated spike (S) protein highly exposed on the surface of the virus plays a key role in virus binding and invasion into host cells as well as elicitation of a protective host immune response. In this study, we have characterized the site-specific N-glyco...

BIOSIGHT

COVID-19 cognitive search engine powered by IBM Watson

The screenshot shows a web browser window with two tabs: "covid-19 - Google Scholar" and "Biosight". The main content area displays the Biosight interface for searching COVID-19 entities. A search bar at the top says "[Click here to enter entity search terms]". Below it are four search results: "parkin (35)", "Brady (11)", "bleomycin (10)", and "NCBI (9)". A text block explains that entities are real-world objects and provides examples of search operators:

Operator	Finds Documents
bleomycin,parkin	Containing both "bleomycin" and "parkin".
bleomycin parkin	Containing either "bleomycin" or "parkin" (or both).
"Himalyan palm"	Containing the exact phrase "Himalyan palm".
!wuhan	Does not contain "wuhan".

Below this is a section titled "Concepts" with a placeholder text: "Use cognitive search powered by IBM Watson. Send natural language queries with metadata fields like concepts and entities."

The right side of the screen shows search results for the term "bleomycin". The first result is a summary: "Same source as above 70%, confirming that 269 COVID-19 was genetically different [63]. Within the RdRp region, it was found that 270 another bat coronavirus, RaTG13, was the closest relative to COVID-19 and formed a 271 distinct lineage from other bat SARS-like coronaviruses [39, 41] ... Paper ID: bb8e3d331bb2975e1c644c8729b842797da2d626". The "Metadata" tab is selected.

Two more results follow, both titled "Same source as above":

- In this study, we use MLDSP [51] and MLDSP-GUI [52] with CGR as a 82 numerical representation of DNA sequences to assess the classification of COVID-19 83 from the perspective of machine learning-based alignment-free whole genome 84 comparison of genomic signatures. Using MLDSP and MLDSP-GUI, we confirm that 85 the COVID-19 belongs..
Paper ID: bb8e3d331bb2975e1c644c8729b842797da2d626
- The trained models are then used to predict the labels of 29 COVID-19 333 sequences. As expected, all classification models correctly predict that the COVID-19 334 sequences belong to the same families 335..
Paper ID: bb8e3d331bb2975e1c644c8729b842797da2d626

At the bottom, there are "Metadata" and "Similarity" tabs.

How Taiwan Is Becoming A Top Destination For Artificial Intelligence In Asia

Forbes

ICT科技防疫與趨勢

陳榮貴 博士

中華電信研究院/副院長

2020/04/29

新冠肺炎文字雲

武漢肺炎 文字雲

ALWAYS AHEAD 為了你 一直走在最前面

Refresh your life

大綱

- ❖ COVID-19 科技防疫
- ❖ COVID-19 加速生活型態改變
- ❖ 5G時代之ICT發展趨勢

ALWAYS AHEAD 爲了你 一直走在最前面

Refresh your life

台灣科技防疫歷程 (1/2)

- 01/20 疾病管制署宣布成立「嚴重特殊傳染性肺炎中央流行疫情指揮中心」
- 01/21 指揮中心公布我國確診首例境外移入嚴重特殊傳染性肺炎個案
- 01/29 對2000多名居家隔離者展開電子監控，一旦擅離居所將立即連線警察機關，要求強制隔離
- 01/29 Line@疾管家 從10萬人急增至63萬人訂閱
- 02/06 口罩販售實名制上路，民眾可持健保卡至藥局購買
- 02/16 「旅客入境健康聲明暨居家檢疫電子化系統」上線
- 02/26 每日定時發送雙向簡訊給「居家檢疫」民眾，可透過簡訊回報健康狀況 (4/05增加「居家隔離」類)
- 02/27 疫情指揮中心提升至一級開設

台灣科技防疫歷程 (2/2)

- 03/12 口罩實名制2.0上線，民眾可透過健保卡、自然人憑證登入平台，或藉由健保快易通行動APP進行認證預購
- 03/19 所有入境民眾皆須配合居家檢疫14天，次日發布違反隔離、檢疫規定的裁罰基準
- 04/03 聊天機器人「疫止神通」LINE Bot上線。居家檢疫民眾可每日進行自主健康通報，並取得防疫相關協助資訊
- 04/04 透過「災防告警細胞廣播傳染病警示訊息發送系統」，提醒清明連假出遊請保持社交距離或配戴口罩
- 04/10 觀光景點、夜市及寺廟等實施人流管制
- 04/20 公布染疫敦睦艦隊官兵足跡，並對同時段出現在同地點的民眾發送提醒簡訊
- 04/26 透過「高速公路1968」APP發佈觀光景點人潮燈號

行動網路電子圍籬

- ❖ 以行動通信或手機GPS定位，估算居家檢疫者/隔離者之位置
- ❖ 一旦離開檢疫範圍，系統會發送「告警簡訊」給當事人、民政單位、衛政單位及轄區警察，以掌握當事人行蹤
- ❖ 可使用政府配發之防疫手機或當事人之私人門號手機

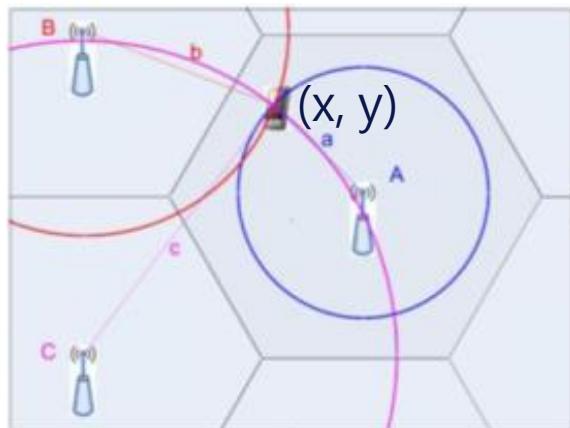

行動網路基地台定位技術

❖ CID(Cell Identity)：用戶手機目前連線基站

優點	<ul style="list-style-type: none">• 資料取得技術門檻低• 投資成本小
缺點	<ul style="list-style-type: none">• 用戶位置以基站信號涵蓋範圍估計，誤差範圍約200m(市區)~1km(郊區)

❖ CID+footprint：三角定位+移動軌跡輔助(機器學習)

優點	<ul style="list-style-type: none">• 定位誤差較低，取決於基站密度，市區優於郊區
缺點	<ul style="list-style-type: none">• 資料取得技術門檻高• 投資成本高

定位準確度：GPS > CID+footprint >> CID

電子入境

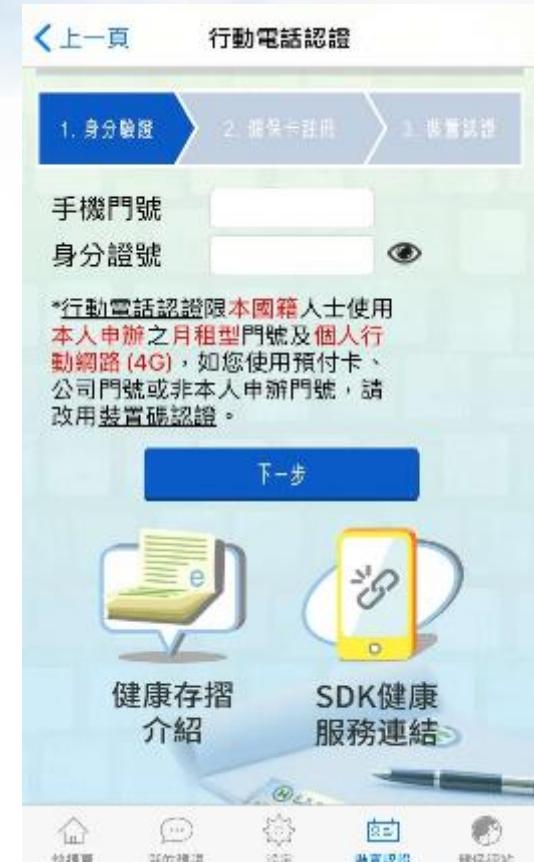

- ❖ 「旅客入境健康聲明暨居家檢疫通知書」電子化，避免手寫字跡潦草不易辨識，2/16起可於登機前利用線上填寫
- ❖ 透過「掃描QR Code、輸入資料、接收簡訊、出示手機」4步驟完成，節省現場登打、加快入境通關效率
- ❖ 避免資料輸入錯誤，以及資料不實的防疫漏洞
- ❖ 整合至14天居家關懷的「防疫追蹤系統」及追蹤告警的「電子圍籬系統」

The screenshot shows the 'Quarantine System for Entry' interface. At the top right is the logo of the Ministry of Health and Welfare (MHW) with the text '衛生福利部' and 'Ministry of Health and Welfare'. Below it is the title '入境檢疫系統' and its English equivalent 'Quarantine System for Entry'. The main form area starts with a required field '國籍 Nationality' with a dropdown menu set to '中華民國 (TAIWAN)'. Next is a '航班 Flight No.' field consisting of two input boxes separated by a dash. Below these fields is a note: 'Ex:BR-17,BR-9,BR-27,BR-11,BR-15,BR-51,BR-31,CI-3,CI-7,CI-23'. Following this are several optional checkboxes for travel history: '中/港/澳 China/ Hong Kong/ Macao', '日/韓 Japan/ South Korea', '歐洲 Europe', '中東 Middle East', '美/加 U.S.A/ Canada', and '紐/澳 New Zealand/ Australia'. All text is in Chinese, except for the English placeholder text in the flight number field.

口罩販售實名制

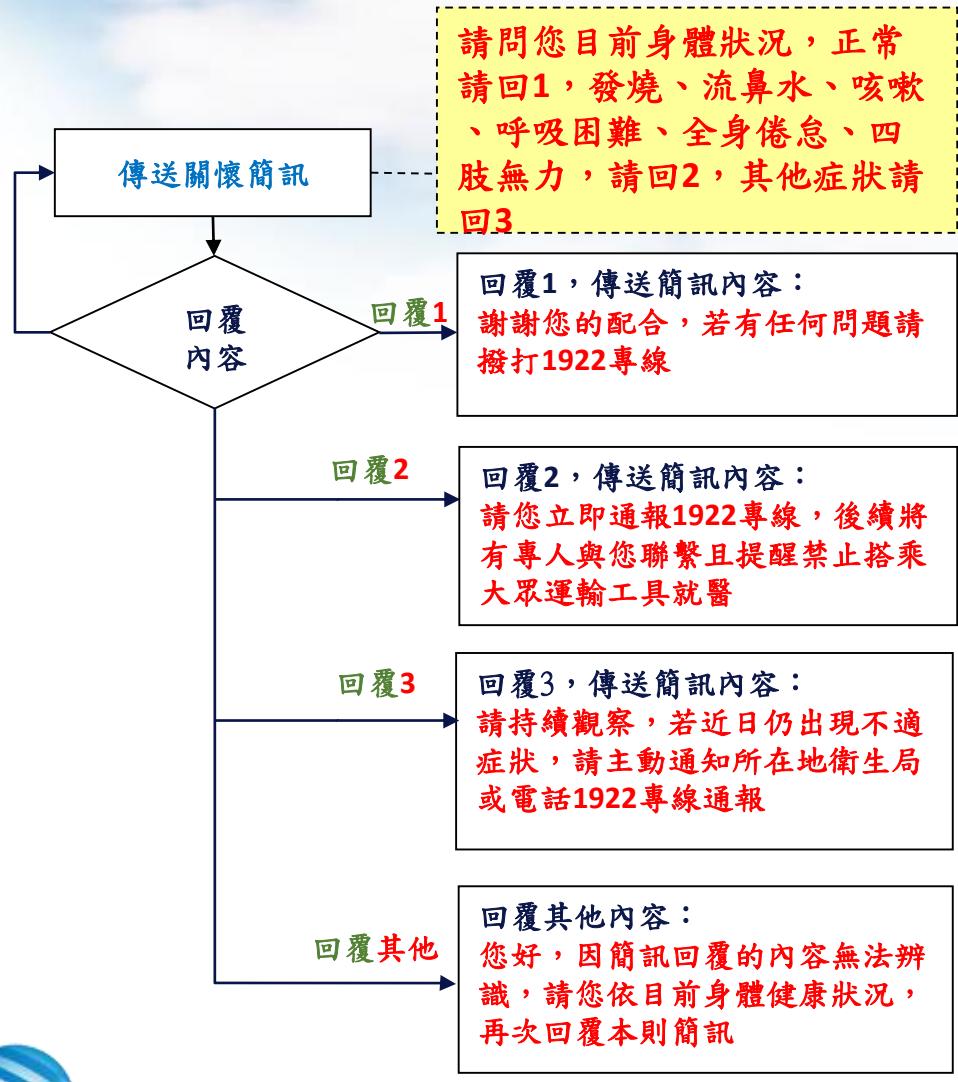

- ❖ 「口罩供應」在台灣防疫工作中扮演重要角色，除立即成立口罩國家隊，快速提升產能之外，並透過科技，公開、透明、公平的讓民眾購買
- ❖ 2/6 口罩實名制 1.0
 - 利用健保特約藥局既有「讀取晶片健保卡以認證領藥」之管道
 - 政府提供open data，供民間開發「口罩地圖」，結合地理資訊及即時剩餘量，供民眾快速前往藥局
- ❖ 3/12 口罩實名制 2.0
 - 網路預購：晶片健保卡/晶片自然人憑證或健保快易通行動APP (OTP實名認證) 登記
 - 線上預約完成後會以EMAIL通知繳款，再結合電信商簡訊通知將領取序號配送至用戶手機
 - 超商領貨：憑中簽序號領貨，兼顧便利和公平性
- ❖ 4/22 口罩實名制 3.0
 - 開放民眾持健保卡，到1萬多家超商門市，直接使用事務機預訂口罩，之後再到原超商領取

雙向關懷簡訊

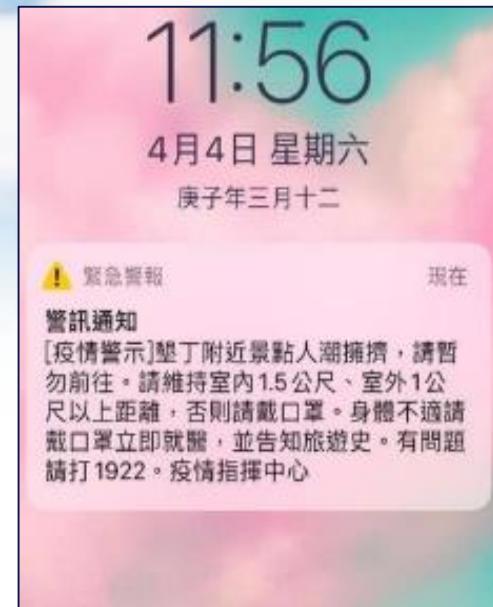

衛福部居家檢疫者雙向關懷簡訊報通流程

- ❖ 2/26起針對居家隔離者(有與確診者接觸史)發送，3/30再加入居家檢疫者(海外回國)
- ❖ 以簡訊自動/互動表達關懷，既可收集其健康狀況，也可確認其手機不離身
- ❖ 被隔離/檢疫者所回覆健康資訊自動提供給衛服部人員進行追蹤管理
- ❖ 回覆資訊的統計數字提供衛服部人員掌握疫情狀況

熱門景點人潮警示

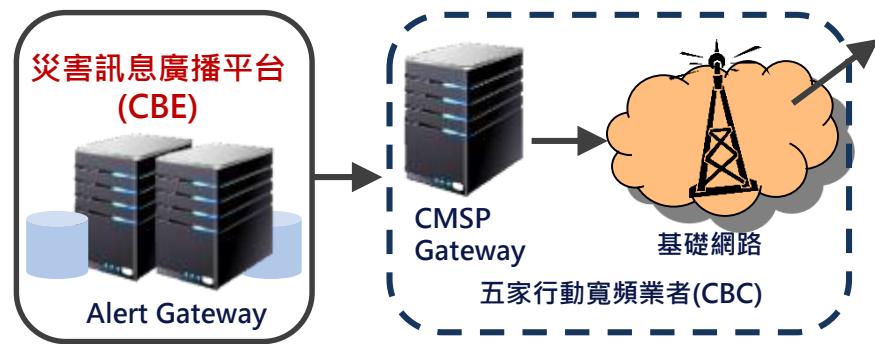

- ❖ 透過統計行動基地台連線之手機數目，估測全台各區域之即時人潮數量
- ❖ 清明節4天連假各大景點人潮湧現，中央流行疫情指揮中心於4/4中午11點56分，透過「災防告警細胞廣播傳染病警示訊息發送系統」，針對11個風景區發出廣播簡訊告警，提醒民眾保持「社交距離」

中華電信人潮分析系統

災防告警細胞廣播傳染病警示訊息發送系統

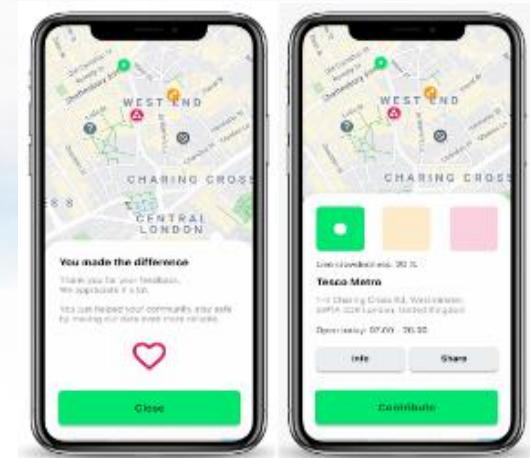

國際案例 (1/2)

❖ 英國 - Keep Your Distance APP

- 提供城市中**POI(地標)**即時擁擠狀況，供用戶評估外出與否，包含地鐵站、超市、藥局等公共地點
- 建立在「**群眾外包**」的機制上，得益於民眾的即時回報，在歷史數據上進行快速更新
- 藉此讓民眾能夠避開人流較多的時段、地區，保持**社交距離**

❖ 印度 - Aarogya Setu APP

- 由印度政府電子和信息技術部NIC開發，5天內下載超過1千萬次
- 基於**GPS**以及**與藍牙互動**的數據，APP會生成社交圖，該APP會在用戶與被測試為陽性的人時聯繫提醒用戶
- 收集的數據以加密的匿名ID存儲在只能由印度政府存取的伺服器

國際案例 (2/2)

❖ 中國 – 健康碼

- 按風險程度分為綠、黃、紅三種APP二維條碼，許多地方都需民眾出示代表健康的綠色碼才允許進出
- 在手機上完成申請，輸入姓名、證件號碼、居住地址、最近14天的旅行經歷及健康狀況，系統會自動顯示健康碼結果
- 由**阿里巴巴**、**騰訊**與各省、市政府合作推出，各地有不同名稱的健康碼，測評標準也未統一

❖ 香港

- 向被隔離者派發印有「二維碼」的監察手帶(或藍牙電子手環)，並安裝一個用於監察的手機APP，隔離者在抵達隔離住所或酒店房間後，需要用**手機掃瞄二維碼啟動程式**
- 手機APP透過監察發射站訊號強弱改變，判斷隔離者有沒有離開隔離處

Bluetooth Low Energy Contact Tracing

❖ 新加坡 TraceTogether

- 新加坡政府科技處為健康部(MOH)研發的APP，至今下載超過100萬次
- 由MOH管控金鑰及上傳之接觸者加密資料

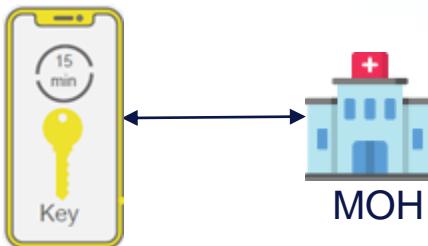

❖ PEPP-PT (Pan-European Privacy-Preserving Proximity Tracing)

- 由歐洲130多成員組成的非營利組織開發
- 可跨國際應用，具有隱私性符合GDPR要求

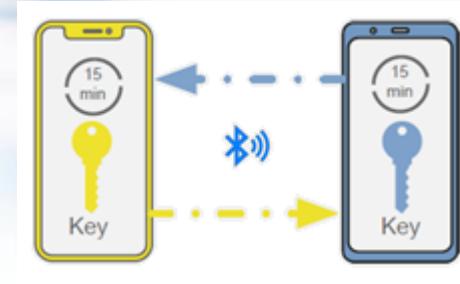

❖ Google & Apple Contact Tracing

- 由Google和Apple兩大業者合作，從系統底層提供低功耗藍芽接觸偵測技術
- 5月先釋出API讓政府機構開發系統，後續會直接內建到iPhone和Android兩大手機OS中

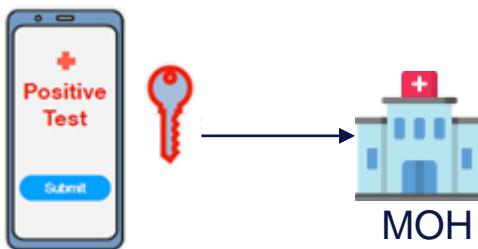

TraceTogether

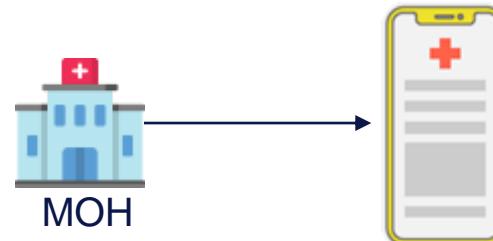

1. 安裝App，以電話號碼註冊，
並從MOH取得匿名ID(每日更新)

2. 透過藍芽交換匿名ID，
並記錄與手機內

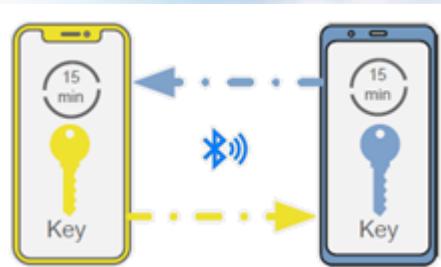

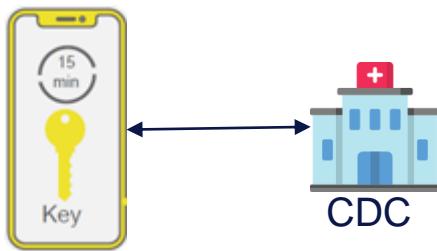

3. 在確診者同意下將與其接觸
的匿名ID上傳至MOH

4. MOH解密後取得接觸者電話號碼
，通知接觸者進一步醫療處理

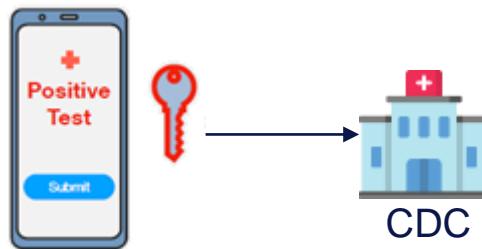

PEPP-PT

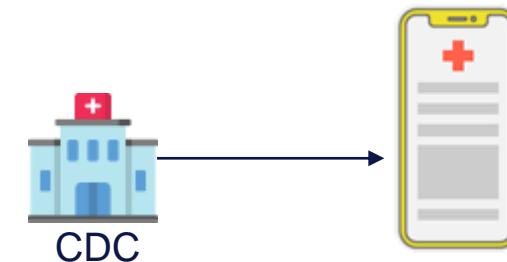

1. 安裝APP，註冊**ID(可匿名)**，
CDC加密ID後，回傳給用戶
(加密ID每小時更新，可預載48個)

2. 透過藍芽交換加密ID
，並記錄於手機內

3. CDC提供認證碼
給**確診者**

4. 在**確診者同意**情況下，確診者將
認證碼及其接觸者的加密ID上傳
至CDC

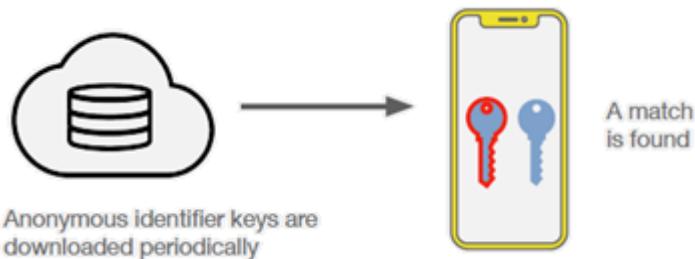

5. CDC驗證認證碼並解密接觸者ID，
透過**APP Push通知**給接觸者，
接受進一步醫療指示

Google & Apple Contact Tracing

1. 安裝APP，以獨有金鑰每日產生日追蹤金鑰和每15分鐘產生滾動式接觸ID
2. 透過藍芽交換滾動式接觸ID，並記錄於手機
3. 在確診者同意下，上傳其14天內的日追蹤金鑰

4. 每個人定期下載該地區確診者日追蹤金鑰，與手機記錄的滾動式接觸ID比對

5. 若有接觸記錄，則顯示接觸狀況和時間(但無法得知距離、地點、身分)及進一步醫療指示

註. 滾動式接觸ID(Rolling Proximity Identifier)是一個16Byte的亂數值，以使用者日追蹤金鑰來加密，每15分鐘換新，因此無法用來持續追蹤同一支手機

低功耗藍芽接觸追蹤方案比較

比較項目	Trace Together	PEPP-PT	Google & Apple
上線時間	2020/3	2020/5	2020/5
提供方式	APP	原始碼	API
用戶註冊	電話號碼	匿名ID	不須註冊ID
判斷接觸者	後端運算	後端運算	終端運算
通知方式	MOH以電話通知	CDC以APP通知	APP自行偵測
隱私保護	符合當地法規	符合GDPR	符合GDPR
跨國追蹤	X	○	○
iOS背景運作	X	X	○

The Great Lockdown

Worst Economic Downturn Since
the Great Depression

World Economic Outlook, April 2020, IMF

COVID-19 加速生活型態改變

❖ 在家工作、遠距視訊會議、線上學習

❖ 宅經濟、線上經濟

- 電商
- 外送 : foodpanda, Uber Eats
- 串流影視、直播
- 線上遊戲 (NBA 2K)

❖ 零接觸

- 行動支付、多元支付
- 遠距醫療、線上看診
- 聲控電梯、....

遠距會議

- ❖ Zoom, Google Hangout, MS Teams, Webex
- ❖ 資安議題

軟體問題

- 自動開啟鏡頭
- UNC (Universal Naming Convention) 造成 Windows 密碼外洩
- 安裝時載入其他程式，可能造成主機被加密勒索

個資外洩

- 傳送個資到 FB 或 LinkedIn
- 傳送個資到 China
- 帳密外洩

亂入

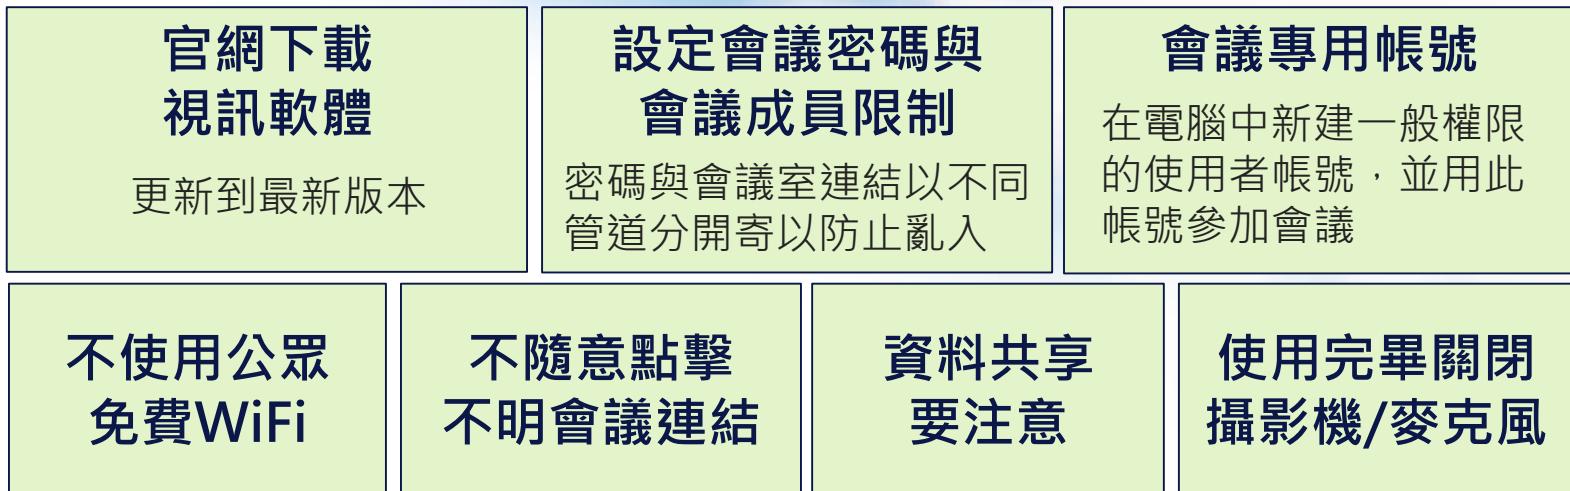

- 視訊會議會莫名被陌生人「亂入」

資安品質與管控不嚴謹

新建會議未設密碼、
未管控與會成員

遠距會議/居家辦公 資安建議

- 1 確保終端設備安全
(防毒、更新)
- 2 登錄終端設備指紋
(企業認可的裝置才得連入)

- 3 使用多元身分驗證
連入VPN
- 4 管控 終端設備與
使用者權限可連結的站點

- 5 終端設備與使用者
連結站點日誌查核

零接觸 行動支付/多元支付

行動支付

- ❖ 病毒會殘留在紙類上長達一天、銅板四小時，減少使用現金
- ❖ 以手機NFC或QR-code掃碼取代實體信用卡、票證卡
- ❖ Apple Pay, Google Pay, Samsung Pay
- ❖ Pi錢包、Line Pay、Taiwan Pay、街口、...
- ❖ PX Pay、My FamiPay、Happy go pay、銀行....

多元支付

- ❖ 收款方可用移動式多元支付機來完成無現金收款
- ❖ 涵蓋實體信用卡與票證卡、手機APP所乘載的電子錢包、虛擬點數等
- ❖ 可延伸到公車、輕軌、渡輪...等交通乘車付費

AR/VR + 遠距應用

ALWAYS AHEAD 爲了你 一直走在最前面

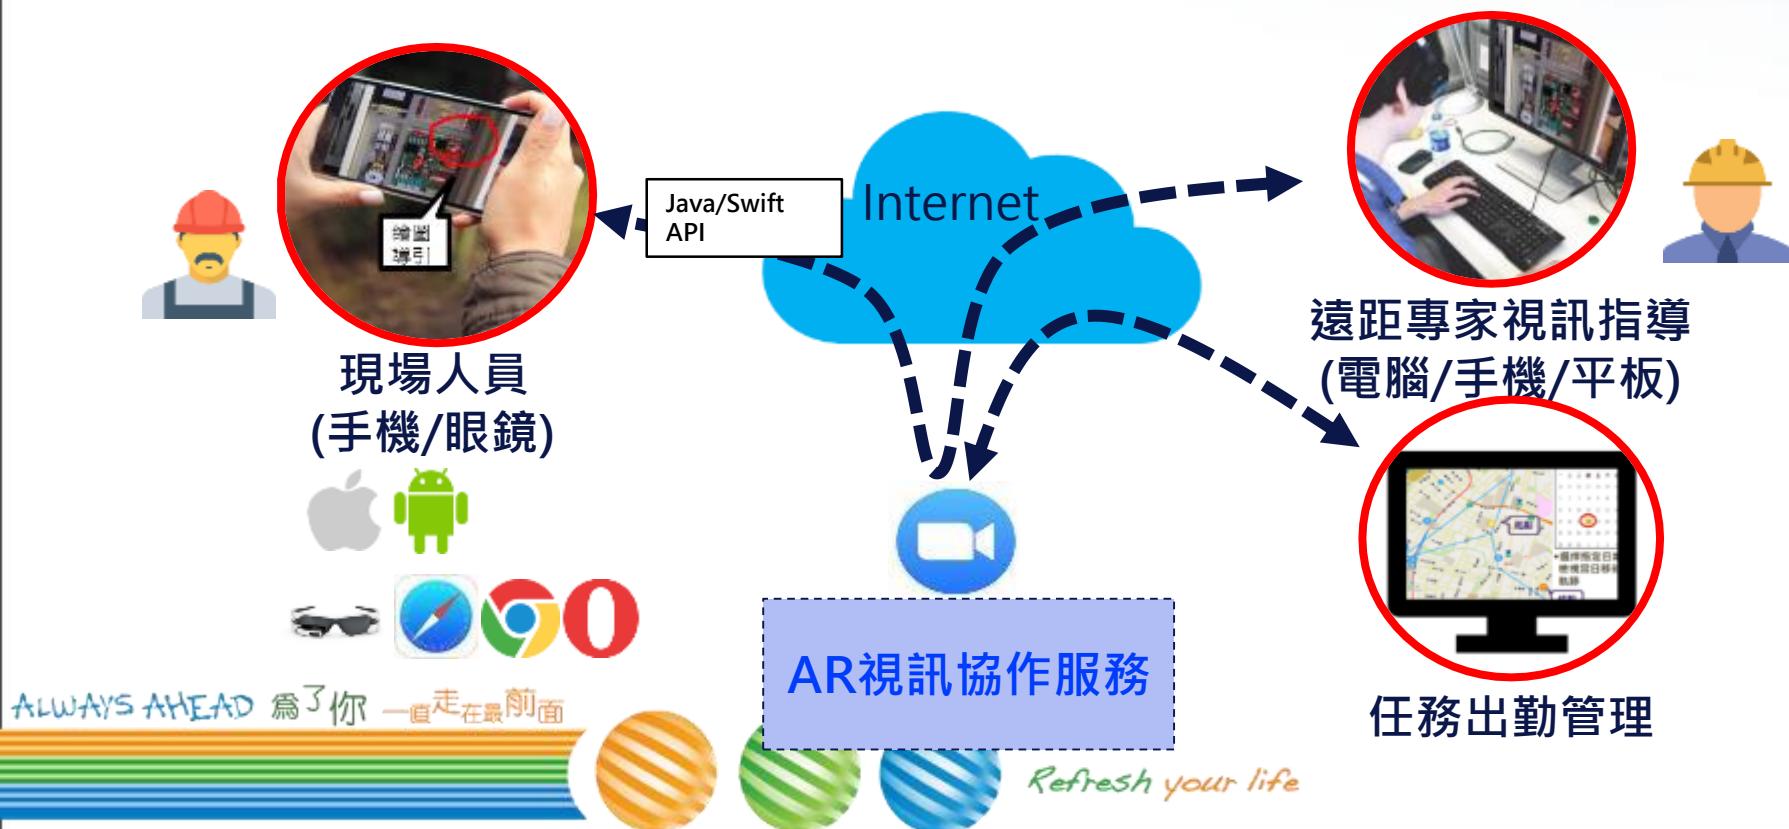

AR視訊協作

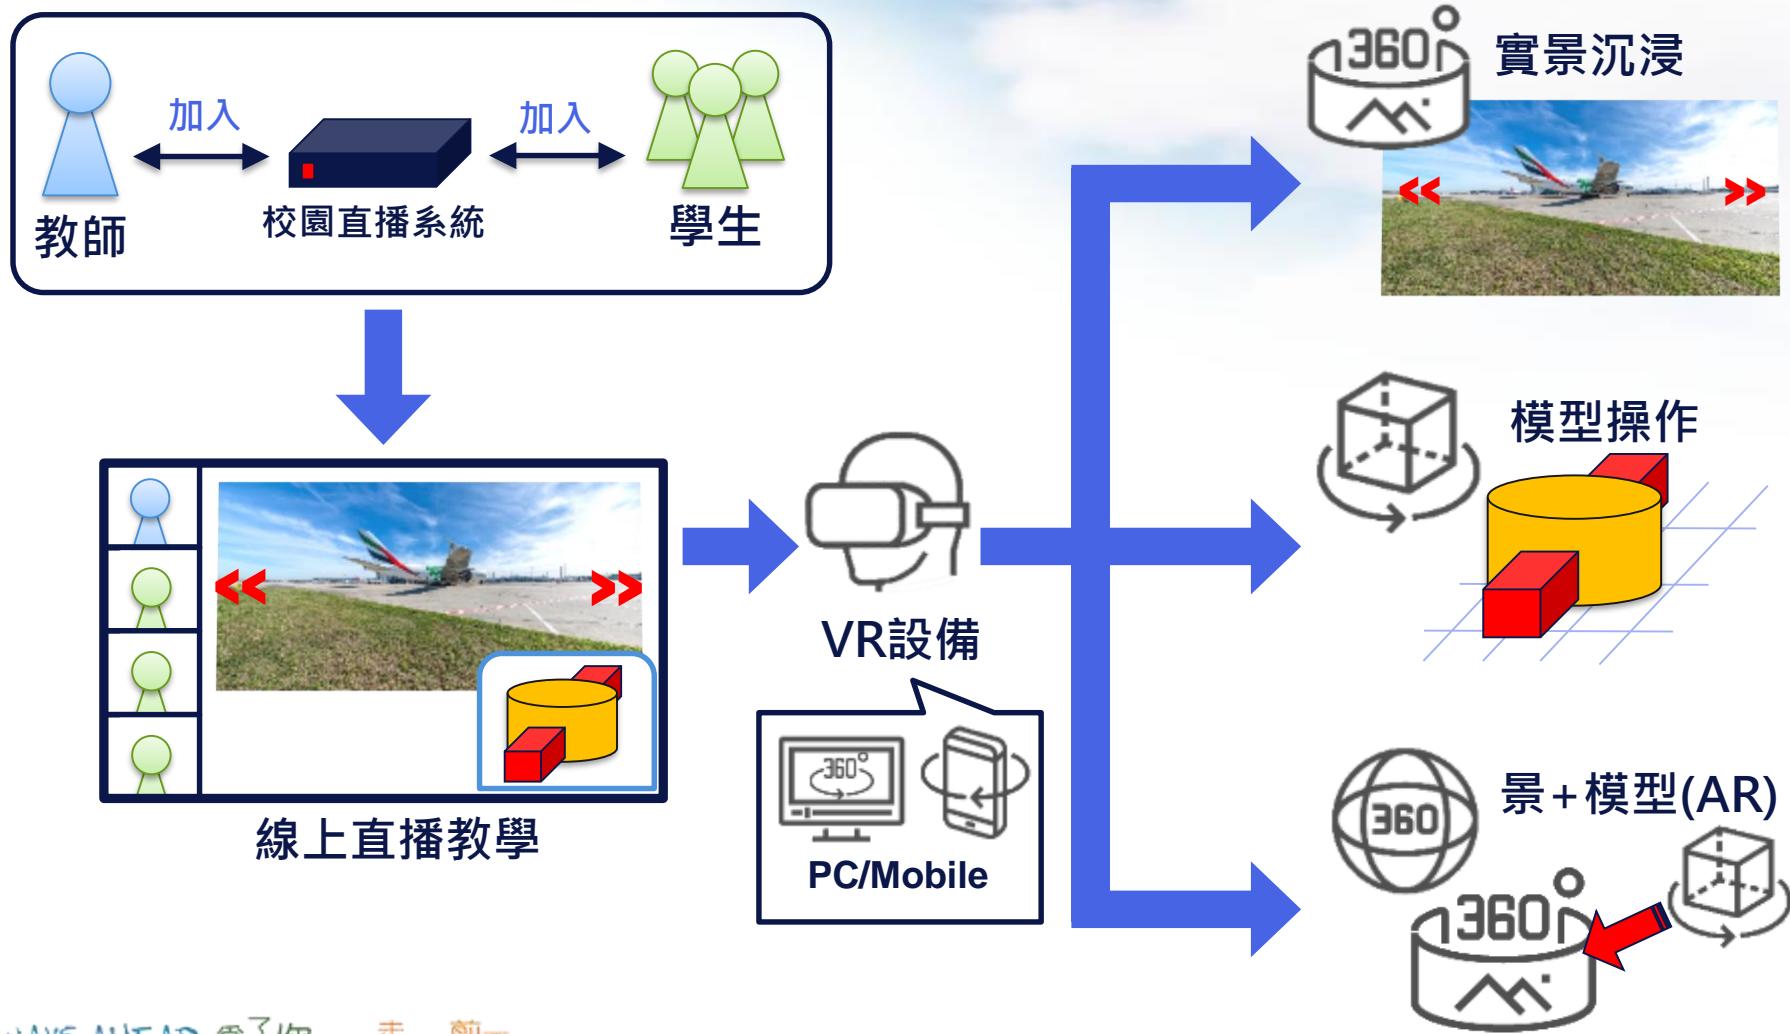

Refresh your life

AR視訊協作

- ❖ 提供企業現場人員與遠距專家透過手機/眼鏡/電腦，執行視訊通話(雙向、多人)、繪圖指引、文字訊息、拍照錄影與監控、任務派工等，以縮短工時及提升作業品質
- ❖ 可用於企業內部員工的溝通訓練，降低出差及面對面溝通的傳染風險
- ❖ 可用於客戶與技術人員之溝通，降低員工與客戶接觸的傳染風險

AR/VR + 直播教學

異地演奏會

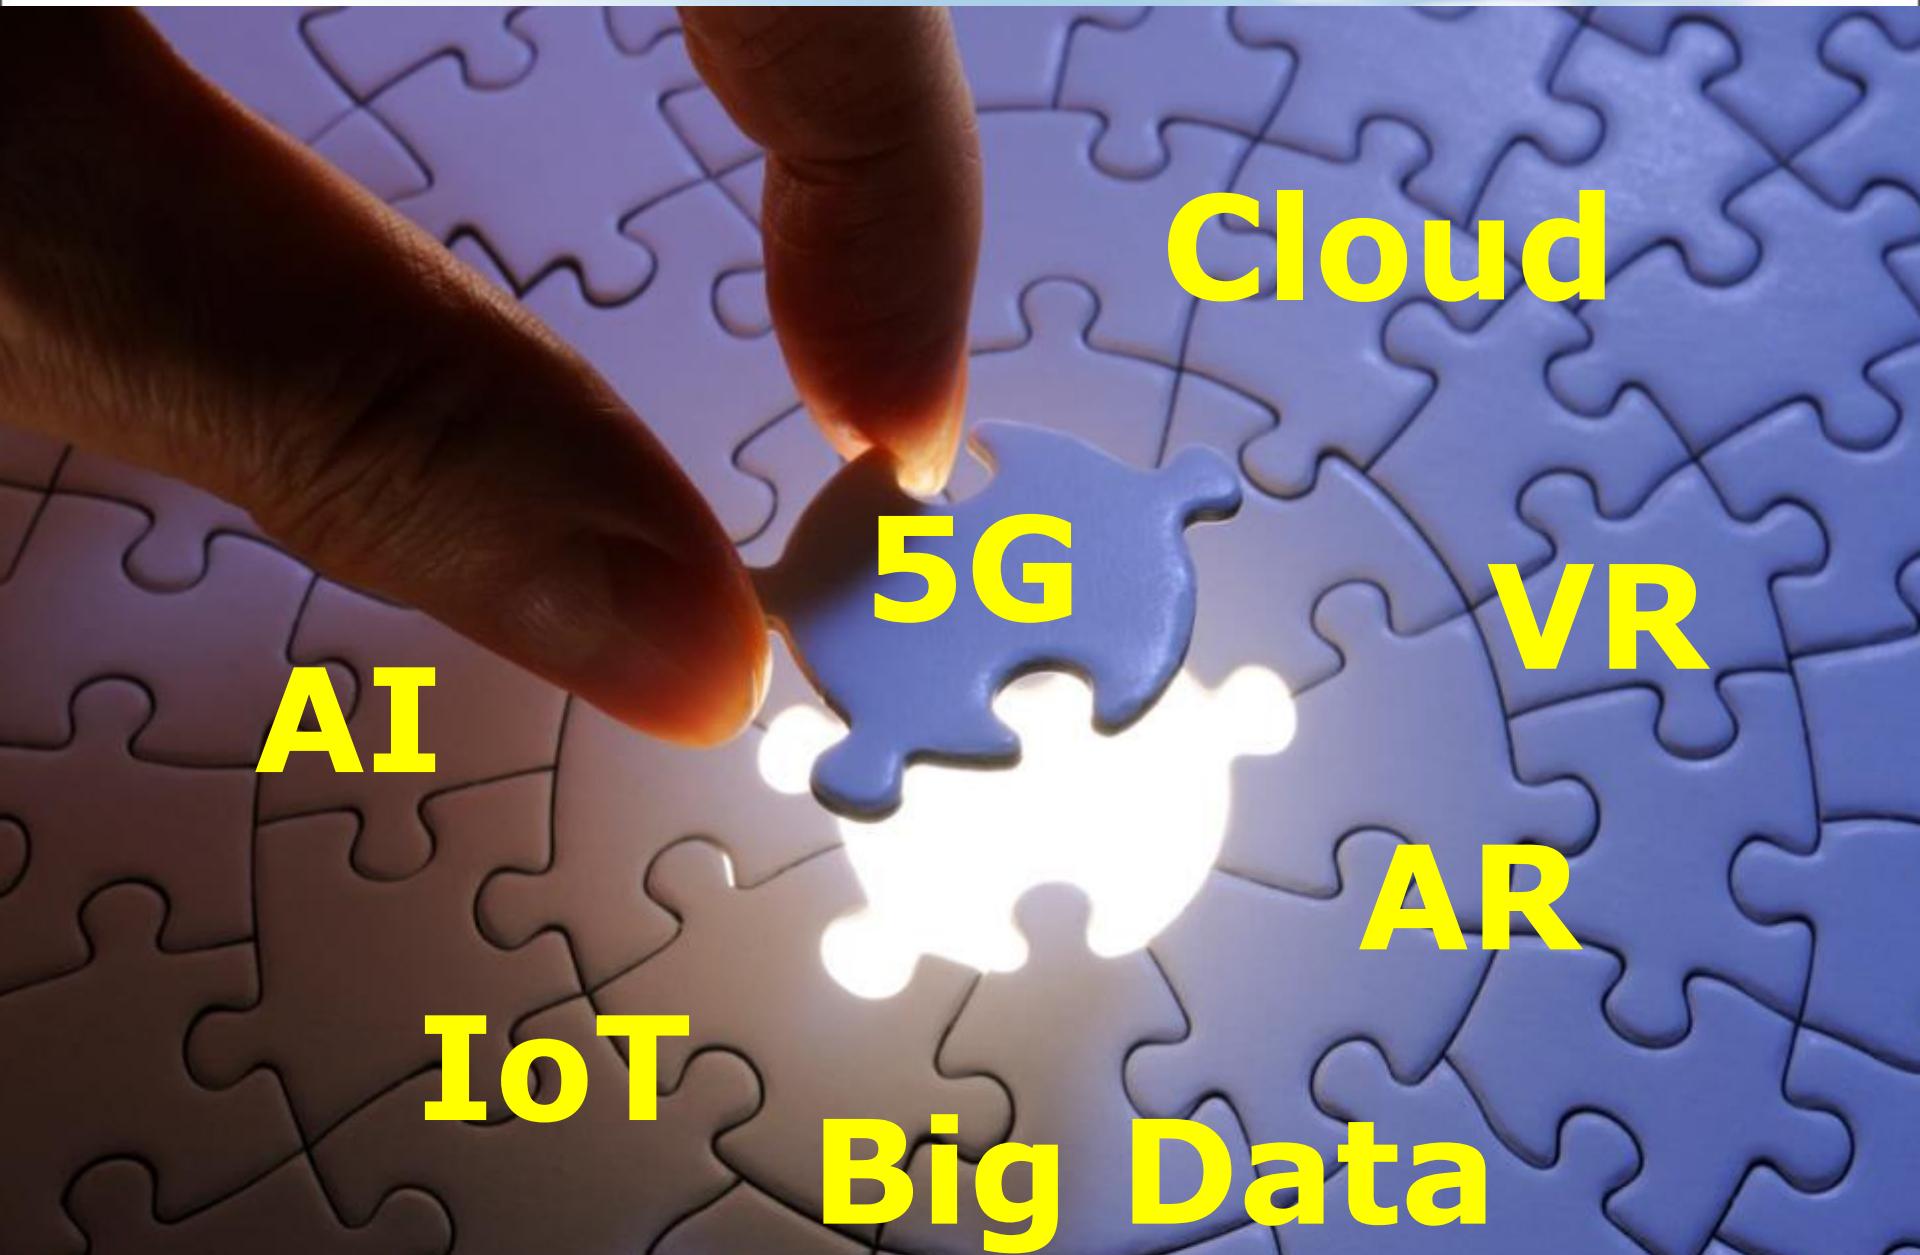

- ❖ 因疫情影響，歐美許多被居家防疫隔離的音樂家與歌手演出機會瞬間大減
- ❖ 透過 ICT 技術，許多合唱團與交響樂團轉而進行異地演奏會，藉以舒緩慰藉隔離民眾心情

5G手術示範教學系統
5G醫學示範教學系統

5G 自駕車與C-V2X應用

- **路口號誌狀態(燈色/秒數)透過C-V2X路側設備(RSU)傳送至自駕車(OBU)顯示，可**提前掌握**前方路口狀況，提高自駕車運行效率與路口通行安全**
- **弱勢用路人預警**：路口攝影機及Radar偵測用路人/車，於**MEC**分析可能的路口衝突，透過5G通訊或C-V2X路側RSU通知自駕車、弱勢用路人
- **優先號誌控制**：運算分析自駕車通過路口時間，進行自駕車優先之路口號誌控制
- 行控中心透過監控系統掌握自駕巴士行駛動態
- 自駕巴士透過5G網路**回報行車資訊**(定位/感測/影像)至監控系統
- **路口號誌、路口影像即時回傳至監控系統**

智慧三表(水/電/瓦斯)

- ◆ 透過5G NB-IoT/Cat M1大涵蓋及低成本優勢，連結公共事業與用戶(最後一哩路)
- ◆ 運用IoT平台收容自動讀表資料，取代人工抄錶
- ◆ 透過智慧分析進行加值應用，預知用戶行為提早管控

中華電信AIoT平台

❖ 結合AI、資安、大數據，掌握平台與應用服務價值鏈

The background of the slide is a photograph of a bright, cloudy sky, tinted with a light blue hue.

Who led the *digital transformation* of your company?

- A: CEO
- B: CTO
- C: COVID-19
